NOTE.--Data on population counts for the various areas of the Virgin Islands are shown in chapter A.

- ¹ Not by race.
- ² Not by urban-rural residence.
- ³ Population 25 years old and over.
- ⁴ Households and population in households.
- ⁵ Median only.

POPULATION PORTION OF 1960 CENSUS SCHEDULE FOR THE VIRGIN ISLANDS OF THE UNITED STATES

U. S. DEPARTMENT OF COMMERCE
BUREAU OF THE CENSUS

1960 CENSUS OF POPULATION AND HOUSING
VIRGIN ISLANDS OF THE UNITED STATES

a. Island	d. ED number	
b. City or quarter	e. Housing unit number	
c. Enumerated by	Date	f. If continued from another schedule, check here <input type="checkbox"/>
g. Address—House/Apt. No. No.	Street, avenue, or road (If unnamed, describe location)	

INSTRUCTIONS TO ENUMERATOR

- FIRST** — Determine if there is more than one housing unit.
ASK more than one family live in this home?
If "Yes"—Do they live and eat with the family, or do they have separate living quarters?
SECOND — Using one page for each person, enter names in P1 and mark relationship in P2. List persons in this order:
The head
His wife
Unmarried sons and daughters (in order of age)
Married sons and daughters and their families
Other relatives
Other persons, such as lodgers, maids, or hired hands who live in and their families living in.
ASK What is the name of the head of this household?
What are the names of all other persons who live here?
Check for completeness.
THIRD — ASK Is there anyone else who usually lives here, but is temporarily away?
Is anyone else staying here now who has no usual residence elsewhere?
I have..... names now. Is that right?
FOURTH — Fill P3 - P22 for each person.
FIFTH — Check for visitors. Fill an Individual Census Report if there is no one to report for a visitor at his home.
ASK Did my visitor stay here overnight Thursday, March 31?
SIXTH — Check type of housing unit in H1. Fill H2 to H22 (except in group quarters). For "un.it." use SEVENTH—ASK Check for other units.
EIGHTH — Are there any vacant apartments or any vacant rooms for rent?
Ask about the next unit.
Name of head? Number of people? When at home? If vacant—Whom to see?

CONFIDENTIAL—The Census is required by the United States Constitution and further authorized by 15 U.S.C. 5, 9, 141, 221-4. The law requires that the inquiries be answered completely and accurately, and guarantees that the information furnished will be accorded confidential treatment. The Census report cannot be used for purposes of taxation, investigation, or regulation.

QUESTIONS FOR THIS PERSON
(Check appropriate box, or write in answer.)

P1. Name of this person..... (Enter last name first)
P2. What is his relationship to the head of this household?
Head..... 1
Wife of head..... 2
Son or daughter of head..... 3
Other - Specify: (Son-in-law, mother, lodger, maid, inmate, etc.)
Code

P3. Sex
Male..... 1
Female..... 2

P4. Color or race
White..... 1
Negro..... 2
Mixed..... 3
Other - Specify: (Chinese, Japanese, Filipino, etc.)
Code

P5. When is the month and year of his birth? (Enter the age conversation table to obtain date of birth.)
Jan., Feb., Mar..... 1
April, May, June..... 2
July, Aug., Sept..... 3
Oct., Nov., Dec..... 4
AND..... (Year)..... (Year)
P6. Marital status is he now.....
Married..... 1 Divorced..... 4
Casually married..... 2 Separated..... 5
Widowed..... 3 Never married..... 6

P7. If this is a woman who has ever been married or consensually married...
How many babies has she ever had, not counting stillbirths?
..... (Number)..... OR None.....
Virgin Islands of the United States..... 1
Puerto Rico..... 2
United States..... 3
Code
Other - Specify: (Name of U.S. territory or foreign country)
P9. What is the highest grade (or year) of regular school he has ever attended? (Check one box.)
(0) Never attended school..... 0 (Skip to P11)
(0) Kindergarten..... 9
(0) Elementary school..... 1 2 3 4 5 6 7 8
(1) High school..... 1 2 3 4 5 6 or more.
(2) College..... 1 2 3 4
P10. Did he finish this grade (or year)?
Yes..... 1 No..... 2
P11. If born after March 1925—Has he attended school (or college) at any time since February 1, 1960?
Yes..... 1 No..... 2
P12. Check whether this person was born before April 1946—
Yes, born before April 1946.....
(Continue with P13) (Skip to next person)

P13. Did this person work at any time last week? (Include part-time work, such as a Saturday job, delivering newspapers, or work on a family business or farm. Do not count own housework.)
Yes..... 1 No..... 2 (Skip to P15)
P14. How many hours did he work last week at all jobs? (Hours)
P15. If "No" in P13—Was he looking for work or on layoff from a job?
Yes..... 1 No..... 2
P16. Even though he did not work last week, does he now have a job he usually works at?
Yes..... 1 No..... 2
P17. When did he last work at all, even for a few days? (Year)..... OR Never worked.....
P18. If he worked in 1950 or after—Describe in a to d the job or business held last week. If no job or business last week, give information for last job or business.
a. For whom did he work?
..... (Name of company, business, organization, or other employer) Code
b. What kind of business or industry was this?
..... (Hotel, junior high school, radio and TV service, retail grocery, highway construction, firm, etc.) Code
c. What kind of work was he doing?
..... (Waiter, 8th grade English teacher, repairman, grocery checker, truck driver, farmer, etc.) Code
d. Class of worker (Mark from information in a to c, or ask if not clear.)
Employee of a private company, business or profession..... 1
Government employee (Federal, State, or territorial)..... 2
Self-employed in own business, professional practice, or farm..... 3
Working without pay in a family business or farm..... 4
P19. How many weeks did he work in 1959, either full-time or part-time? (Include paid vacation, paid sick leave, and military service.)
..... (Weeks worked)
P20. How much did he earn in 1959 in wages or salary, from all jobs? (Before deductions for taxes, bonds, etc. Include commissions and tips)
\$..... OR None.....
P21. How much did he earn in 1959 working in his own business, professional practice, partnership or farm? (Net income after business expenses)
\$..... OR None.....
P22. Last year, 1959, did he receive any income from: Social Security, pensions, or veteran's payments? (Include interest in dividends on stocks and bonds. Any other source not already reported?)
Yes..... 1 No..... 2
Enter amount for entire year..... \$.....

Characteristics of the Population

GENERAL

This part of Volume I presents the major portion of the information compiled from the 1960 Census of Population for the Virgin Islands of the United States. It contains the two chapters, A and B, previously published in the PC(1)-A and PC(1)-B final report series. All of the statistics presented in these two chapters are based on a complete count of the population.

Chapter A, "Number of Inhabitants," comprises tables 1 to 4 and contains statistics on the number of persons in the Virgin Islands, by islands, and for cities and quarters. In addition, data are presented showing the population of the Virgin Islands and of the individual islands classified by urban-rural residence.

Chapter B, "General Population Characteristics," comprises tables 5 to 33 and presents the demographic, social, and economic statistics obtained in the 1960 Census of the Virgin Islands. Data are presented on race, sex, age, nativity and country of birth, school enrollment, level of school in which enrolled, years of school completed, marital status, household relationship, married couples and families, children ever born, employment status, weeks worked in 1959, class of worker, occupation group, industry group, and income in 1959 of persons and of families and unrelated individuals. The amount of detail presented is substantially greater for the area as a whole than for its subdivisions, and data from earlier censuses on the subjects treated are generally limited to the whole area. Tables 5 to 28 contain figures for the Virgin Islands as a whole; tables 29 to 31 include summaries of demographic, social, and economic characteristics for islands and for places of 2,500 inhabitants or more; and tables 32 and 33 contain summary data for places of 1,000 to 2,500 and for minor civil divisions.

A list of the subjects included, showing the type of area and the tables in which they appear, is presented on page III. A map of the Caribbean area appears on pages 3 and 10, and a map of the Virgin Islands showing islands, cities, and quarters is presented on pages 5 and 11.

HISTORICAL BACKGROUND

The Virgin Islands of the United States, formerly known as the Danish West Indies, were acquired by the United States by purchase from Denmark in 1917, the formal transfer of possession having taken place on March 31 of that year. St. Croix, St. John, and St. Thomas are the principal islands in the group comprising the Virgin Islands of the United States. In addition to these three, there are some sixty-five smaller islands, most of which are uninhabited.

Local censuses of population were taken by the Danish Government at irregular intervals between 1835 and 1911, and a special census was taken in 1917 under the supervision of the U.S. Bureau of the Census. In the 1930 and subsequent censuses, the population was enumerated in conjunction with the regular decennial census of the United States, the field work having been done under the supervision of the Governor in accordance with plans prescribed by the Director of the Census. The Honorable John D. Merwin, Governor of the Virgin Islands, served as Census Supervisor, and Dr. Alonzo G. Moron as Assistant Supervisor, for the 1960 Census enumeration.

According to the first census in 1835, the population of the Virgin Islands was 43,178. By 1917, when the islands were acquired by the United States, the population had decreased to 26,051. Between 1917 and 1930 the population continued to decline, but each of the last three censuses has shown an increase. As of April 1, 1960, the population of the Virgin Islands was 32,099.

COLLECTION AND PROCESSING PROCEDURES

In 1960, as in previous censuses of the Virgin Islands, the data for each household were obtained by personal interview. The census enumerators were instructed to visit every housing unit in their assigned areas and to interview the head or other responsible member of the household. If no suitable respondent was at home at the time of his first visit, the enumerator was required to make at least two callbacks on different days in an effort to obtain the information. After three calls, if he was still unsuccessful in finding a suitable respondent, he was instructed to obtain as much of the desired information as possible from neighbors, hired help, or relatives living in the area.

The processing of the census returns for the Virgin Islands involved manual editing of the schedules for omissions and inconsistencies, coding of selected items on the schedules (such as relationship), transferring the information on the schedules to a set of punch cards, further editing of the data by machine, tabulation of the data, posting of the tabulated data to work sheets, computation of statistical measures such as percentages and medians, typing of the final text and tables, and printing.

The definitions of terms which are given below are consistent with the instructions given to the enumerators and to the field office personnel who reviewed the schedules. As in all censuses and surveys, however, there were some failures to execute these instructions exactly. A few types of known or suspected

inaccuracies in the data arising from failure to apply the definitions correctly are noted in this text.

Additional information on the collection and processing of the data appears in the section beginning on page XVIII.

CHANGES IN DEFINITIONS

The definitions of the major concepts used in the 1960 Census of the Virgin Islands are given below. A

few of the definitions used in 1960 differ from those used in 1950. These changes were made after consultation with users of census data and were made in order to improve the statistics, even though it was recognized that comparability would be affected. In some cases, the new definitions were tested by the Bureau of the Census in connection with its Current Population Survey and census pretests, and, where feasible, measures of the impact of the change on the statistics were developed.

AREA CLASSIFICATIONS

USUAL PLACE OF RESIDENCE

In accordance with census practice dating back to 1790, each person enumerated in the 1960 Census was counted as an inhabitant of his usual place of abode, which is generally construed to mean the place where he lives and sleeps most of the time. This place is not necessarily the same as his legal residence, voting residence, or domicile; however, in the vast majority of cases, the use of these different bases of classification would produce substantially the same statistics, although there may be appreciable differences for a few areas.

In the application of this rule, persons were not always counted as residents of the places in which they happened to be found by the census enumerators. Ordinarily, visitors in private homes and transient guests in hotels were not enumerated as residents of those places. Information on persons away from their usual place of residence was obtained from other members of their families, landladies, etc. If an entire family was expected to be away during the whole period of the enumeration, the information was obtained from neighbors. A matching process was used to eliminate duplicate reports for a person who reported for himself while away from his usual residence and who was also reported at his usual residence by someone else.

Persons in the Armed Forces quartered on military installations were enumerated as residents of the area in which their installations were located. Members of their families were enumerated where they actually resided. As in 1950, college students were considered residents of the communities in which they were residing while attending college. The crews of vessels of the U.S. Navy and of the U.S. merchant marine in harbors of the Virgin Islands were counted as part of the population of the ports in which their vessels were berthed on April 1, 1960. Inmates of institutions, who ordinarily live there for long periods of time, were counted as inhabitants of the place in which the

institution was located, whereas patients in general hospitals, who ordinarily remain for short periods of time, were counted at, or allocated to, their homes. Persons without a usual place of residence were counted where they were enumerated.

Persons who were abroad for an extended period (in the Armed Forces, working at civilian jobs, studying in universities, etc.) are not included in the population of the area. On the other hand, persons temporarily abroad on vacations, business trips, and the like were enumerated at their usual residences on the basis of information received from members of their families or from neighbors.

URBAN-RURAL RESIDENCE

According to the definition adopted for use in the 1960 Census, the urban population comprises all persons living in places of 2,500 inhabitants or more. Two places were thus classified as urban in the 1960 Census, namely, Charlotte Amalie and Christiansted.

ISLANDS

The three principal islands, St. Croix, St. John, and St. Thomas, are the primary administrative units of the area.

MINOR CIVIL DIVISIONS

The islands are subdivided into cities and quarters which constitute the minor civil divisions of the area. The city of Charlotte Amalie comprises King Quarter, Queen Quarter, and Crown Prince Quarter. The cities of Christiansted and Frederiksted are not subdivided.

PLACES

The term "place" as used in this report refers to a concentration of population, regardless of the existence of legally established limits, powers, or functions. All of the places in the Virgin Islands are designated as cities.

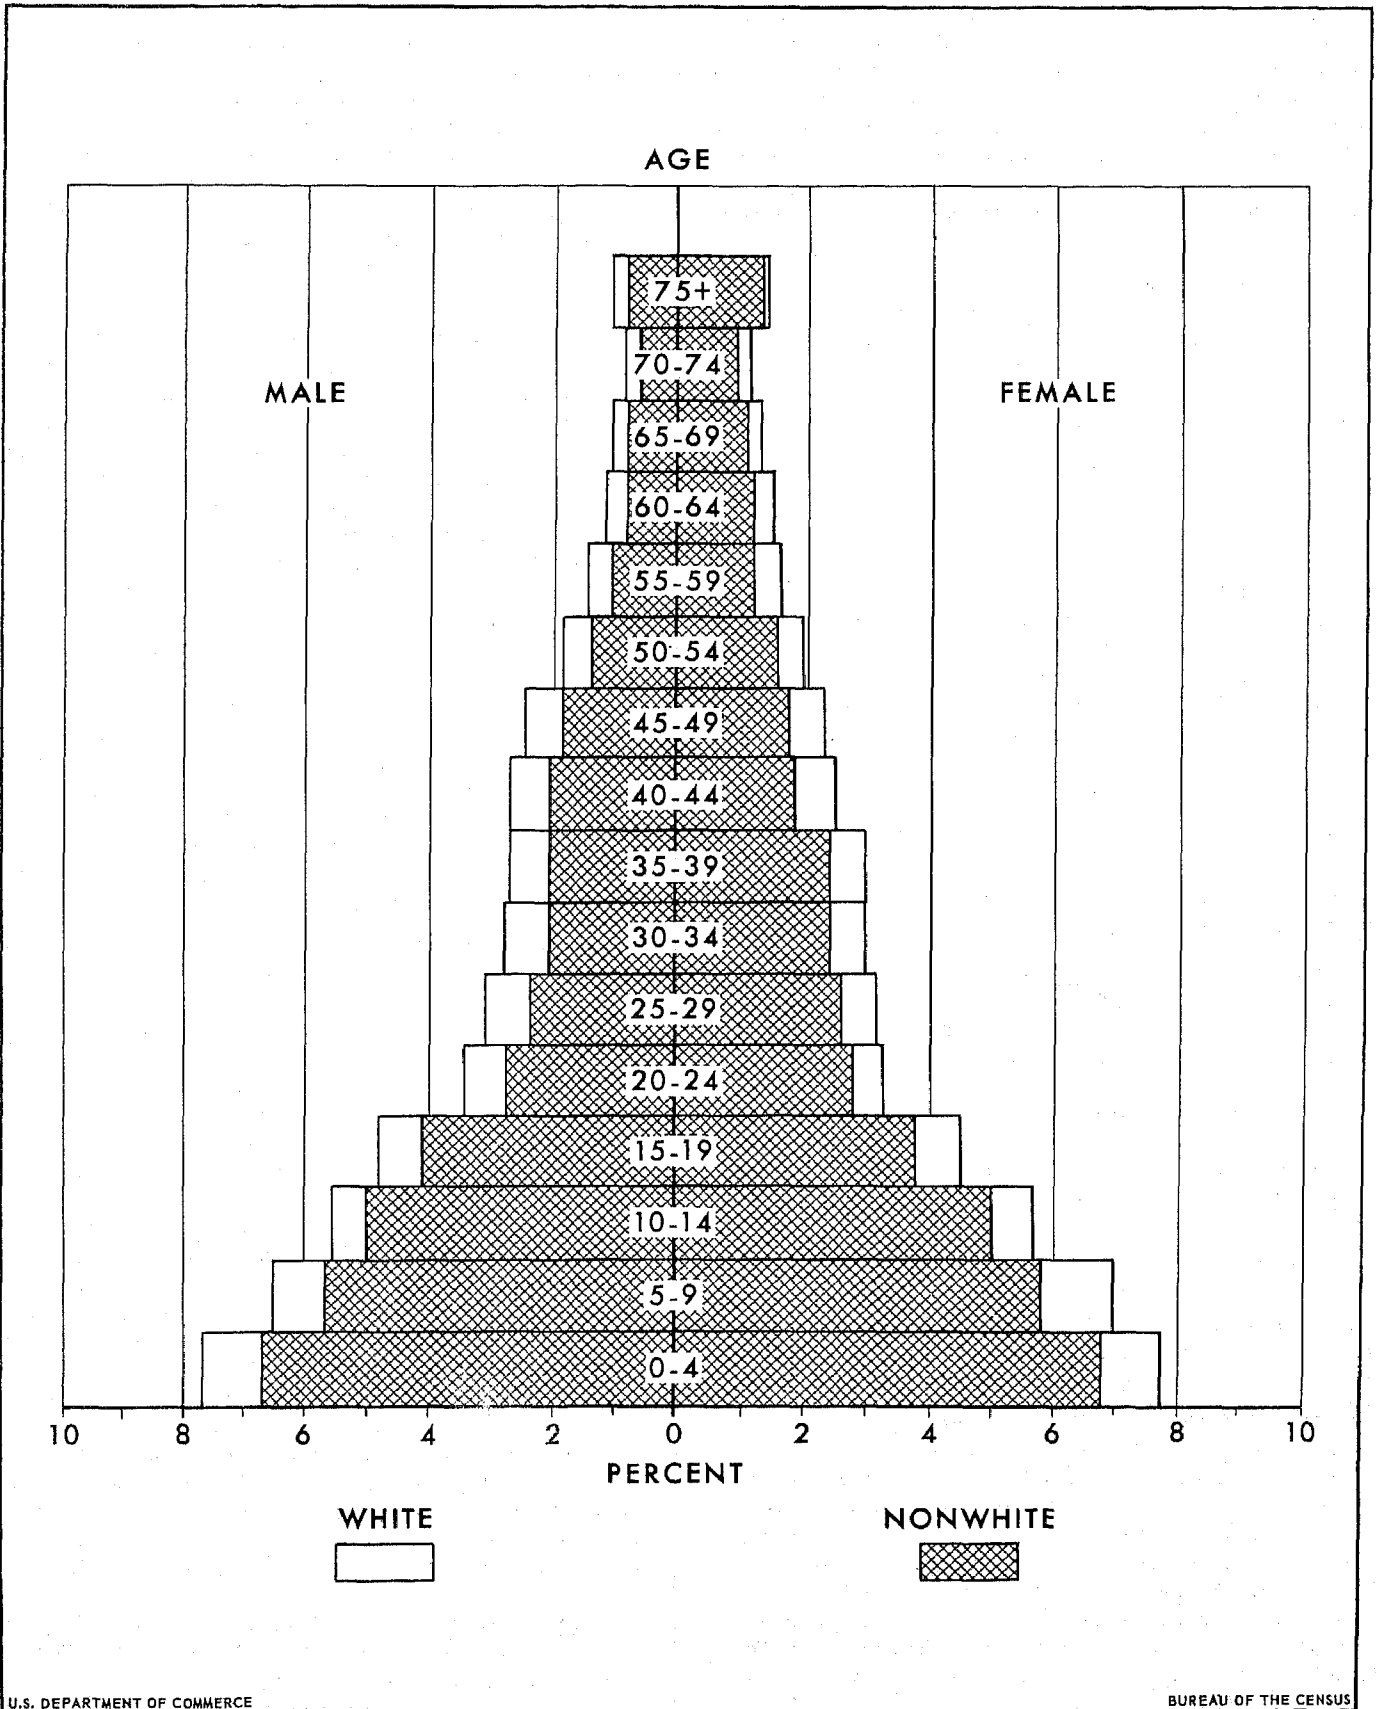

SOCIAL CHARACTERISTICS

AGE

The age classification is based on the age of the person in completed years as of April 1, 1960. For the first time since 1900, the Bureau of the Census obtained data on the age of the population by asking

for date of birth. The enumerator asked the question, "What is the month and year of his birth?" and then recorded the quarter and year in the space provided on the schedule. The comparable question in previous censuses was designed to obtain the age in completed years. It was believed that the wording of the

PERCENT DISTRIBUTION BY AGE, COLOR, AND SEX, FOR THE POPULATION OF THE VIRGIN ISLANDS OF THE UNITED STATES: 1960

question in terms of date of birth would result in fewer errors in reporting information relating to age.

Assignment of unknown ages.--Whenever the age of a person was not reported on the schedule, it was estimated on the basis of other available information such as marital status, year of school in which enrolled, employment status, age of other members of the household, and type of household. This method of assigning unknown ages on the basis of related information was also used in the 1950 Census. In previous censuses, persons of unknown age were shown as a separate category.

Median age.--The median, a type of average, is presented in connection with the data on age which appear in this report. The median age is that age which divides the distribution into two equal parts--one-half of the cases falling below this value and one-half of the cases exceeding this value.

RACE

The concept of race, as it has been used by the Bureau of the Census, is derived from that which is commonly accepted by the general public. It does not, therefore, reflect clear-cut definitions of biological stock, and several categories obviously refer to national origin. As in previous censuses of the Virgin Islands, the 1960 classification was obtained in most cases by the enumerator's observation. However, where the enumerator failed to report race for an individual, the classification was made in the editing process.

White.--The term "white" is used to designate persons of the Caucasian race.

Negro.--The term "Negro" is used to designate only full-blooded Negroes.

Mixed and other races.--The group designated "mixed and other races" comprises persons of mixed Negro and other (white or nonwhite) parentage, and Japanese, Chinese, Filipinos, American Indians, etc.

NATIVITY AND COUNTRY OF BIRTH

In this report, information on country of birth is used to classify the population into two major categories, native and foreign born.

Native.--The category "native" comprises persons born in the Virgin Islands, the United States, the Commonwealth of Puerto Rico, or any U.S. possession. The small number of persons whose country of birth was not indicated on the schedule are assumed to have been born in the Virgin Islands.

Foreign born.--Persons not classified as "native" according to the above definition were considered foreign born. Foreign-born persons were asked to report their country of birth according to international boundaries as recognized by the United States Government on April 1, 1960. Similarly, the list of countries used in editing and coding the data on country of birth of the foreign born was composed of those countries officially recognized by the United States at the time of the census.

SCHOOL ENROLLMENT AND YEAR OF SCHOOL IN WHICH ENROLLED

Definitions

The data on school enrollment were derived from answers to the question, "Has he attended regular school (or college) at any time since February 1, 1960?" This question was asked only for persons under 35 years of age and tabulated for persons 5 to 34 years of age. The data on year of school in which enrolled were obtained by tabulating, for those who were enrolled, the responses to the question on highest grade attended (see section below on "Years of school completed").

Schooling included.--Persons were included as enrolled in school if they reported attending or being enrolled in a "regular" school or college at any time between February 1, 1960, and the time of enumeration. "Regular" schooling refers to formal education obtained in public and private (denominational or non-denominational) kindergartens, graded schools, colleges, universities, or professional schools, whether day or night school, and whether attendance was full time or part time. That is, "regular" schooling is that which may advance a person toward an elementary school certificate or high school diploma, or a college, university, or professional degree. Schooling that was not obtained in a regular school and schooling from a tutor or through correspondence courses were counted only if the credits obtained were regarded as transferable to a school in the regular school system. Persons who had been enrolled in a regular school since February 1, 1960, but who had not actually attended, for example, because of illness, were counted as enrolled in school.

Schooling excluded.--Persons were excluded from the enrollment figures if the only schools they had attended since February 1, 1960, were not "regular" (unless courses taken at such schools could have been counted for credit at a regular school). Schooling which is generally regarded as not "regular" includes that which is given in nursery schools, in specialized vocational, trade, or business schools, in on-the-job training, and through correspondence courses.

Level and year of school in which enrolled.--Persons who were enrolled in school were classified according to the level and year of school in which they were enrolled. Tables in this report show the number of persons enrolled in kindergarten, and in specified years of elementary school, high school, and college. Elementary school, as defined here, includes grades 1 to 8; and high school includes grades 9 to 12. If a person was attending a junior high school, the equivalent in terms of 8 years of elementary school and 4 years of high school was obtained. The term "college" includes junior or community colleges, regular 4-year colleges, and graduate or professional schools.

Enumeration of college students.--College students were enumerated in 1950 and 1960 where they lived while attending college, whereas in earlier censuses they generally were enumerated at their parental

home. This change in procedure may have some effect upon the comparability of the figures on enrollment for persons at the college level.

Comparability

Earlier census data.--In 1950 and 1960, the questions on school enrollment referred to the period from February 1 to the date of enumeration. In 1940, however, the corresponding question referred to a somewhat shorter period, the period from March 1 to the date of enumeration. Furthermore, in earlier censuses, the question was not restricted as to the kind of school the person was attending. In the 1960 Census of the Virgin Islands, kindergarten enrollment was separately identified and included with the regular enrollment figures.

The age range for which enrollment data have been obtained has varied for the several censuses. Information on enrollment was recorded for persons 5 to 24 years old in 1940, for persons 5 to 29 years old in 1950, and for those 5 to 34 years old in 1960. The extended age coverage in the recent censuses reflects the increasing number of persons in their late twenties and early thirties who are attending regular colleges and universities.

In 1960, as in prior censuses, persons for whom there was no report as to school enrollment were allocated as either enrolled or not enrolled. The editing rules were determined largely on the basis of information available regarding ages of compulsory school attendance. In general, in 1960, persons 7 through 16 years of age for whom school enrollment was not reported were counted as enrolled, while those over 16 years old were considered not enrolled. In 1940 and 1950, persons 5 through 17 years of age not reporting on school enrollment were tabulated as enrolled.

Data from other sources.--Data on school enrollment are also collected and published by other governmental agencies. This information generally is obtained from reports of school systems and from other surveys and censuses. These data are only roughly comparable with data collected by the Bureau of the Census by household canvassing because of differences in definitions, subject matter covered, time references, and enumeration methods.

YEARS OF SCHOOL COMPLETED

Definitions

The data on years of school completed were derived from answers to the questions, "What is the highest grade (or year) of regular school he has ever attended?" and "Did he finish this grade (or year)?" As indicated above, these questions on educational attainment applied only to progress in "regular" schools. Both questions were asked of all persons 5 years of age and over. In the present report, these data are shown for persons 14 to 24 years old not enrolled in school and for all persons 14 years old and over.

Highest grade of school attended.--The first question called for the highest grade attended, regardless of "skipped" or "repeated" grades, rather than the number of full school years which the person

had spent in school. If the highest grade of school attended was in a junior high school, the instructions were to determine the equivalent in elementary grades 1 to 8 or high school grades 1 to 4.

Enumerators were instructed to obtain the approximate equivalent grade in the American school system for persons whose highest grade of attendance was in a foreign school system, whose highest level of attendance was in an ungraded school, whose highest level of schooling was measured by "readers," or whose training by a tutor was regarded as qualifying under the "regular" school definition.

Completion of grade.--The second question on educational attainment asked whether or not the highest grade attended had been completed. It was to be answered "Yes" if the person had successfully completed the entire grade or year indicated in response to the previous question on the highest grade ever attended. If the person was still attending school in that grade, had completed only a half grade or semester, or had dropped out of or failed to pass the last grade attended, the question was to be answered "No."

Comparability

In the 1950 Census, a single question was asked on highest grade of school completed. Analysis of earlier census returns and those of other surveys conducted by the Bureau of the Census using this type of question indicated that respondents frequently reported the grade or year in which they were enrolled, or had last been enrolled, instead of the one completed. The two-question approach used in 1960 was designed to reduce this kind of error.

In this report, the number in each category of highest grade of school completed for 1960 represents the combination of (a) persons who reported that they had attended the indicated grade and finished it, and (b) those who had attended the next higher grade but had not finished it.

Median School Years Completed

The median number of school years completed is defined as the value which divides the population group into two equal parts--one-half having completed more schooling and one-half having completed less schooling than the median. This median is expressed in terms of a continuous series of numbers representing years of school completed (such as 9 for the first year of high school and 13 for the first year of college). The persons completing a given school year were assumed to be distributed evenly within the interval from .0 to .9 of the year. In fact, at the time of census enumeration (generally April or May), most of the enrolled persons had completed at least three-fourths of a school year beyond the highest grade completed, whereas a large majority of persons who were not enrolled had not attended any part of a grade beyond the highest one completed. The effect of the assumption is to place the median for younger persons slightly below, and for older persons slightly above, the true median.

The same procedure for computing this median has been used in the 1940, 1950, and 1960 Censuses. Because of the inexact assumption as to the distribution

within an interval, this median is more appropriately used for comparing groups and the same group at different dates than as an absolute measure of educational attainment.

MARITAL STATUS

The data on marital status were based on replies to the question, "Is he now married, consensually married, widowed, divorced, separated [or] never married?" The classification refers to the marital status of the person at the time of enumeration. Persons reported as "legally married" (i.e., those reporting themselves "married" in answer to the question), "consensually married," or "separated" were classified as subcategories of the group "married." The subcategory "legally married" includes only persons who have been formally married. It includes both those who have been married only once and those who have remarried after having been widowed or divorced. The subcategory "consensually married" includes persons who are not legally married but who are living together in common-law marriage. The subcategory "separated" includes persons who have either legally or consensually married and have subsequently been deserted or have parted because of marital discord and have not obtained a divorce. The enumerators were instructed to report persons whose only marriage had been annulled as single. Persons "ever married" are those in the categories "married" (including "consensually married" and "separated"), "widowed," and "divorced."

Differences between the number of married men and the number of married women are due partly to the absence of husbands or wives from the area at the time of enumeration. Examples are women whose husbands were in the Armed Forces overseas and immigrants whose husbands or wives were still abroad. Differences may also rise because the husband and wife had different places of residence and because of differences in the completeness and accuracy of reporting on marital status for men and women.

A married person with "spouse present" is a man or woman whose spouse was enumerated as a member of the same household even though he or she may have been temporarily absent on business or vacation, visiting, in a hospital, etc., at the time of enumeration. The small number of persons living with their spouse in group quarters are classified as married, spouse absent.

The number of married men with wife present, shown in this report, is identical with the number of married couples. (See discussion of "married couple" below.) By definition, this number should also be identical with the number of married women with husband present. However, the figures may not agree exactly because of minor differences in the tabulations. Married persons with "spouse absent--other" comprise married persons employed and living away from their homes, those whose spouse was absent in the Armed Forces, in-migrants whose spouse remained in other areas, husbands or wives of inmates of institutions, married persons (other than separated) who were living in group quarters, and all other married persons for whom place of residence was not the same as that of their spouse.

Comparability

The 1960 marital status categories for the Virgin Islands are similar to those of the 1950 Census except for the addition of the category "separated" and the exclusion of all persons in group quarters from the category "married, spouse present."

HOUSEHOLD AND GROUP QUARTERS MEMBERSHIP, AND RELATIONSHIP TO HEAD OF HOUSEHOLD

Definitions

The data on households, group quarters, and relationship to head of household were obtained primarily from the question, "What is his relationship to the head of this household?"

Household.--A household consists of all the persons who occupy a housing unit. A house, an apartment or other group of rooms, or a single room, is regarded as a housing unit when it is occupied or intended for occupancy as separate living quarters, that is, when the occupants do not live and eat with any other persons in the structure and when there is either (1) direct access from the outside or through a common hall or (2) a kitchen or cooking equipment for the exclusive use of the occupants.

The average population per household is obtained by dividing the population in households by the number of households. The number of households is equal to the number of heads of households.

Group quarters.--All persons who are not members of households are regarded as living in group quarters. Group quarters are living arrangements for institutional inmates or for groups containing five or more persons unrelated to the person in charge. Group quarters are located most frequently in institutions, lodging and boarding houses, military and other types of barracks, college dormitories, fraternity and sorority houses, hospitals, homes for nurses, convents, monasteries, and ships. Group quarters are also located in a house or an apartment in which the living quarters are shared by the person in charge and five or more persons unrelated to him.

The population in group quarters is classified into two types, "inmate of institution" and "other." Inmates of institutions are persons for whom care or custody is provided in such places as homes for delinquent or dependent children; homes and schools for the mentally or physically handicapped; places providing specialized medical care for persons with mental disorders, tuberculosis, or other chronic disease; nursing and domiciliary homes for the aged and dependent; prisons; and jails. Resident institutional staff members not living in separate housing units and all persons in group quarters other than in institutions are included in the category "other."

Relationship to head of household.--This subject pertains only to persons who are members of households. Five categories of relationship to head of household are recognized in this report.

The "head of household" is the member reported as the head by the household respondent. The instructions to enumerators defined the head as the person

considered to be the head by the household members. However, if a married woman living with her husband was reported as the head, she was reclassified as wife of head, and her husband was classified as the head for the purpose of these tabulations.

Household heads are either heads of primary families or primary individuals. The head of a primary family is a household head living with one or more persons related to him by blood, marriage, or adoption. A primary individual is a household head living alone or with nonrelatives only.

The "wife of head" is a woman married to and living with a household head. This category includes women in common-law marriages as well as women in formal marriages. This category is somewhat less inclusive than the category of married women, husband present, because it excludes those married women whose husband is not head of the household. By definition, the number of wives of household heads is identical with the number of married couples with own household or the number of husband-wife families with own household.

A "child of head" is a son, daughter, stepchild, or adopted child of the head of the household (regardless of the child's marital status or age). This category excludes all other children, sons-in-law, and daughters-in-law in the household.

An "other relative of head" is a household member related to the head by blood, marriage, or adoption but not included in either the category "wife of head" or "child of head."

A "nonrelative of head" is any person in the household not related to the head by blood, marriage, or adoption. Nonrelatives consist of lodgers and resident employees.

Comparability

The 1960 definition of a household differs slightly from that used in the 1950 Census. The change arises as a result of the shift from a dwelling unit to a housing unit as the basic unit of enumeration in the Census of Housing. Housing units differ from dwelling units mainly in that separate living quarters consisting of one room with direct access but without cooking equipment always qualify as a housing unit in 1960 but qualified as a dwelling unit in 1950 only when located in a regular apartment house or when the room was the only living quarters in the structure. The evidence so far available suggests that using the housing unit concept in 1960 instead of the dwelling unit concept as in 1950, had relatively little effect on the comparability of the statistics for the two dates on the number of households for the area as a whole.

The concept of quasi-household used in 1950 is similar to the concept of group quarters used in 1960. In 1950, as in 1960, groups of persons with this type of living arrangement were excluded from the count of households.

Except for the household concept, the definitions with respect to relationship to head of household are essentially the same as in 1950. However, the statistics for certain relatively small categories by relationship and family status may have been significantly affected by the change in the household definition. The change from dwelling unit to housing unit

(and, therefore, the change in household definition) is discussed in Vol. IV, 1960 Census of Housing, Components of Inventory Change, Part 1A.

MARRIED COUPLE, FAMILY, AND UNRELATED INDIVIDUAL

Married Couple

In the 1960 Census, a married couple is defined as a husband and his wife enumerated as members of the same household. Statistics on married couples were compiled in 1960 for persons in housing units only. Data are not available for the very small number of married couples in group quarters. In the 1950 Census, the figures for married couples include those in quasi-households.

A "married couple with own household" is a married couple in which the husband is a household head; the number of such married couples is the same as the number of "husband-wife families with own household." The number of married couples with own household is also equal to the number of women classified as wife of the household head.

Family

A family consists of two or more persons living in the same household who are related to each other by blood, marriage, or adoption; all persons living in one household who are related to each other are regarded as one family. Thus, if the son of the head of the household and the son's wife are members of the household, they are treated as part of the head's family. Not all households contain families, because a household may be composed of a group of unrelated persons or one person living alone. A few households contain more than one family, that is, two family groups in the same household in which none of the members of one family is related to any of the members of the other family. A "husband-wife family" is a family in which the head and his wife are enumerated as members of the same household.

Statistics on the total number of families were compiled in 1960 only for persons in housing units. The 1950 Census data on families included those in quasi-households as well as those in dwelling units.

Unrelated Individual

As the term is used in the 1960 Census, an unrelated individual is a member of a household who is not related to anyone else in the household or is a person living in group quarters who is not an inmate of an institution. Unrelated individuals who are household heads are called "primary individuals." Those who are not heads of households are called "secondary individuals."

CHILDREN EVER BORN

The data on children ever born were derived from answers to the following question, which was asked of all women who had ever been married: "How many babies has she ever had, not counting stillbirths?" The 1960 Census was the first census of the Virgin Islands to include a question on number of children ever born.

Although the question on children ever born was asked only of women reported as having been married (including consensually married), the data are not limited to legitimate births. On the other hand, the data are probably less complete for illegitimate than for legitimate births. The enumerator was instructed to include children born to the woman before her pres-

ent marriage, children no longer living, and children away from home, as well as children borne by the woman who were still living in the home.

The schedule contained a terminal category of "10 or more" children ever born. For purposes of computing the total number of children ever born, the terminal category was given a mean value of 11.

ECONOMIC CHARACTERISTICS

EMPLOYMENT STATUS

Definitions

The data on employment status were derived from answers to the following questions:

1. Did this person work at any time last week?
2. If "Yes" in (1) - How many hours did he work last week at all jobs?
3. If "No" in (1) - Was he looking for work or on layoff from a job?
4. If "No" in (3) - Even though he did not work last week, does he now have a job he usually works at?

These questions are designed to identify, in this sequence, (a) persons who worked at all during the reference week; (b) those who did not work but were looking for work or were on layoff; and (c) those who neither worked nor looked for work but had jobs or businesses from which they were temporarily absent. For those who worked during the reference week, a question was asked on hours of work.

Reference week.--In the 1960 Census, the data on employment refer to the calendar week prior to the date on which the respondents were interviewed by the enumerators. This week is not the same for all respondents because not all persons were enumerated during the same week. The majority of the population was enumerated during April and May, but the enumeration was not completed until July. The employment status data for the 1950 Census refer to the approximately corresponding period in 1950.

Employed.--Employed persons comprise all civilians 14 years old and over who were either (a) "at work"--those who did any work for pay or profit, or worked without pay for 15 hours or more on a family farm or in a family business; or (b) "with a job but not at work"--those who did not work and were not looking for work but had a job or business from which they were temporarily absent because of bad weather, industrial dispute, vacation, illness, or other personal reasons.

Unemployed.--Persons are classified as unemployed if they were civilians 14 years old and over and not "at work" but looking for work. A person is considered as looking for work not only if he actually tried to find work during the reference week, but also if he had made such efforts recently (i.e., within the past 60 days) and was awaiting the results of these efforts. Examples of looking for work are:

1. Registration at a public or private employment office.

2. Meeting with or telephoning prospective employers.

3. Being on call at a personnel office, at a union hall, or from a nurses' register or other similar professional register.

4. Placing or answering advertisements.

5. Writing letters of application.

Persons waiting to be called back to a job from which they had been laid off or furloughed were also counted as unemployed.

Labor force.--The labor force includes all persons classified as employed or unemployed, as described above, and also members of the Armed Forces (persons on active duty with the United States Army, Air Force, Navy, Marine Corps, or Coast Guard). The "civilian labor force" comprises only the employed and unemployed components of the labor force.

Not in labor force.--This category consists of all persons 14 years old and over who are not classified as members of the labor force and includes persons doing only incidental unpaid family work (less than 15 hours during the week). Most of the persons in this category are students, housewives, retired workers, seasonal workers enumerated in an "off" season who were not looking for work, inmates of institutions, or persons who cannot work because of long-term physical or mental illness or disability. Of these groups not in the labor force, only inmates of institutions and students are shown separately.

Problems in Classification

Although the classification of the population by employment status is correct for most regular full-time workers, it is subject to error in marginal cases. Some of the concepts are difficult to apply; more important, for certain groups, the complete information needed is not always obtained. For example, students or housewives may not consider themselves as working if their job required only a few hours of work a week.

Comparability

Statistics on gainful workers.--The data on the labor force for 1940, 1950, and 1960 are not entirely comparable with the statistics for gainful workers for years prior to 1940 because of differences in definition. "Gainful workers" were persons reported as having a gainful occupation, that is, an occupation in which they earned money or a money equivalent, or in which they assisted in the production of marketable goods, regardless of whether they were working or

seeking work at the time of the census. A person was not considered to have had a gainful occupation if his activity was of limited extent. The labor force is defined on the basis of activity during the reference week only and includes all persons who were employed, unemployed, or in the Armed Forces in that week. Certain classes of persons, such as retired workers, some inmates of institutions, recently incapacitated workers, and seasonal workers neither working nor seeking work at the time of the census were frequently included among gainful workers; but in general, such persons are not included in the labor force. On the other hand, the census included in the labor force for 1940, 1950, and 1960 persons seeking work without previous work experience, that is, new workers. These new workers were probably not reported as gainful workers in the Census of 1930.

1940 and 1950 Censuses.--The 1940 and 1950 Census questionnaires, interviewing techniques, and tabulation procedures differed somewhat from each other and from those used in the 1960 Census. In addition, modification in wording and some simplification in concepts were introduced in 1960.

The so-called "main activity" question of 1950--"What was this person doing most of last week--working, keeping house, or something else?"--was omitted from the 1960 schedule on the assumption that the information obtained in that item (e.g., the knowledge that a person was primarily a housewife or a student) might induce enumerators to omit the follow-up questions on work activity, job seeking, etc. It was felt that the loss of the classification of nonworkers (keeping house, in school, unable to work, and "other") shown in 1950 would not be serious. Actually the only group that cannot be approximated by means of data on marital status and school enrollment is the "unable to work" category.

The question on unemployment was revised to include persons on temporary (less than 30-day) layoff as unemployed as well as those on "indefinite" layoff. Formerly, such persons were included among the employed. However, no mention was made either on the schedule or in the instructions to enumerators of the other small categories of "inactive" unemployed covered in the 1950 and 1940 Censuses, that is, those who would have been looking for work except for temporary illness or belief no work was available. Also, the definition of "unpaid family work" was simplified to include any work done without pay in an enterprise operated by a relative, without further specifying (as in 1950) that this relative had to be a member of the same household.

Other data.--Because the 1960 Census employment data were obtained from respondents in households, they differ from statistics based on reports from individual business establishments, farm enterprises, and certain government programs. The data obtained from households provide information about the work status of the whole population without duplication. Persons employed at more than one job are counted only once in the census and are classified according to the job at which they worked the greatest number of hours during the reference week. In statistics based on

reports from business and farm establishments, on the other hand, persons who work for more than one establishment may be counted more than once. Moreover, other series, unlike those presented here, may exclude private household workers, unpaid family workers, and self-employed persons, but may include workers less than 14 years of age. An additional difference arises from the fact that persons who had a job but were not at work are included with the employed in the statistics shown here, whereas many of these persons are likely to be excluded from employment figures based on establishment payroll reports. Furthermore, the household reports include persons on the basis of their place of residence regardless of where they work, whereas establishment data report persons at their place of work regardless of where they live.

WEEKS WORKED IN 1959

The data on weeks worked were derived from answers to the question, "How many weeks did he work in 1959, either full-time or part-time?" The data pertain to the number of different weeks during 1959 in which a person did any work for pay or profit (including paid vacation and sick leave) or worked without pay on a family farm or in a family business. Weeks of active service in the Armed Forces are also included. It is probable that the number of persons who worked in 1959 and the number of weeks they worked are understated, because there is some tendency for respondents to forget intermittent or short periods of employment, or they may have a tendency not to report weeks worked without pay. In the 1950 Census, a question was asked regarding the number of weeks worked in 1949, but the data were not tabulated.

OCCUPATION, INDUSTRY, AND CLASS OF WORKER

The data on occupation, industry, and class of worker were derived from answers to the following questions:

1. For whom did he work?
2. What kind of business or industry was this?
3. What kind of work was he doing?
4. Class of worker:
 - Employee of a private company, business or individual for wages, salary, or commissions.
 - Government employee (Federal or territorial).
 - Self-employed in own business, professional practice, or farm.
 - Working without pay in a family business or farm.

In the 1960 Census, information on occupation, industry, and class of worker was collected for persons in the experienced civilian labor force as well as for persons not in the current labor force but who had worked sometime during the period 1950 to April 1960. All three items related to one specific job held by the person. For an employed person, the information referred to the job he held during the reference week. If he was employed at two or more jobs, the job at which he worked the greatest number of hours during the reference week was reported. For experienced unemployed persons, i.e., unemployed persons

who have had previous job experience, and for those not in the labor force, the information referred to the last job that had been held.

The occupation, industry, and class-of-worker data presented in this report are limited to employed persons only. The classification systems used for the occupation and industry data were developed in consultation with many individuals, private organizations, government agencies, and, in particular, the Inter-agency Occupations Classification Committee of the U.S. Bureau of the Budget.

Occupation

Classification system.--The occupational classification system used for the Virgin Islands is basically the same as that used for the United States. However, because of the relatively small number of workers in the Virgin Islands, the 479 items included in the detailed classification for the United States have been condensed into 48 occupation groups.

For some groups, the title may not adequately indicate the inclusion of certain important components. For these groups, a listing of selected components is given below. More complete information on the composition of the major groups is given in the publication, U. S. Bureau of the Census, 1960 Census of Population, Classified Index of Occupations and Industries, U.S. Government Printing Office, Washington, D.C., 1960.

Professional, technical, and kindred workers.

Medical and other health workers.--Includes dentists, dietitians, healers, medical and dental technicians, pharmacists, public health nurses, public health physicians, therapists, and veterinarians.

Teachers, elementary schools.--Includes grade school teachers, parochial school teachers and principals, elementary schools.

Teachers, secondary schools.--Includes high school teachers, school supervisors, and public school superintendents.

Teachers (n.e.c.¹).--Includes teachers--business college, military school, and nursery school.

Other professional, technical, and kindred workers.--Includes airplane pilots and navigators, architects, college presidents, professors and instructors, engineers--aeronautical, chemical, civil, electrical, industrial, mechanical, metallurgical and mining; farm and home management advisors, government soil conservation aids, judges, lawyers, metallurgists, musicians, music teachers, natural scientists, social workers, surveyors, technicians--electrical, electronic and other engineering and physical sciences and food; wireless operators and wireless telegraphers.

Farmers and farm managers.

Includes owner operators, share croppers and tenant farmers.

Managers, officials, and proprietors, except farm.

Inspectors and officials, public administration.--Includes postmasters.

Other specified managers, officials, and proprietors.--Includes buyers, credit men, purchasing agents and shippers of farm products.

Managers, officials, and proprietors (n.e.c.).--Includes building construction superintendents, cafe operators, dealers, dockmasters, hospital directors, road contractors, store managers, and transportation supervisors.

Clerical and kindred workers.

Secretaries and stenographers.--Includes clerk-stenographers, shorthand reporters and stenotypists.

Other specified clerical workers.--Includes bank tellers, cashiers, messengers, office boys, shipping clerks, telegraph operators and telephone operators.

Clerical and kindred workers (n.e.c.).--Includes bill clerks, cargo routers, court clerks, desk clerks, hotel clerks, medical clerks, order clerks, shop clerks, train clerks, and warehouse clerks.

Sales workers.

Specified sales workers.--Includes hucksters and peddlers, insurance agents and brokers, and newsboys.

Sales workers (n.e.c.).--Includes drug store clerks, manufacturer's agents, and sales clerks--retail trade.

Craftsmen, foremen, and kindred workers.

Carpenters.--Includes boat repairmen, building carpenters, house carpenters, joiners, shipwrights, wood-floor layers, and woodworkers.

Construction craftsmen, except carpenters.--Includes brickmasons, cement and concrete finishers, electricians, excavating, grading and road machinery operators, painters (construction and maintenance), plasterers, and roofers and slaters.

Foremen (n.e.c.).--Includes dock bosses, factory foremen, maintenance foremen and production foremen.

Mechanics and repairmen.--Includes repairers of heating and refrigeration equipment, airplanes, automobiles, office machines, radios and televisions, and railroad cars.

Other craftsmen and kindred workers.--Includes bakers, bench hands (machine shop), blacksmiths, cabinet makers, cranemen, derrickmen, inspectors (machine shop), maintenance machinists, millers, stone carvers, stone cutters, telegraph linemen and servicemen, and tool machinists.

Operatives and kindred workers.

Truck and tractor drivers.--Includes dump-truck drivers, sand haulers, trailer drivers and van drivers.

¹ "N.e.c." means not elsewhere classified.

Other specified operatives and kindred workers.--Includes ambulance drivers, apprentices, fish packers, lockkeepers, painters (except construction and maintenance), power station operators, surveying chainmen, rodmen and axmen, weavers (textile), and wrappers.

Operatives and kindred workers (n.e.c.)--Includes basket weavers, cannery, meat cutters, and shop workers.

Private household workers.

Includes housekeepers, and laundresses in private households.

Service workers, except private household.

Kitchen workers (n.e.c.), except private household.--Includes dishwashers, cook's helpers, and meat carvers.

Protective service workers.--Includes bailiffs, bridge tenders, firemen (fire protection), guards, marshals, policemen, and watchmen.

Other service workers, except private household.--Includes barbers, boarding and lodging house keepers, midwives, porters, and practical nurses.

Farm laborers and farm foremen.

Includes paid farm foremen and laborers, farm service laborers, self-employed, and unpaid family farm laborers.

Laborers, except farm and mine.

Longshoremen and stevedores.--Includes barge loaders, ship loaders, and wharf tenders.

Other specified laborers, except farm and mine.--Includes car washers, garage laborers, teamsters, truck drivers' helpers, and woodchoppers.

Other laborers, except farm and mine (n.e.c.)--Includes baggage handlers, cement layers, excavators, odd-job laborers, ship cleaners, and yard laborers.

Relationship to DOT classification.--The Population Census occupational classification is generally comparable with the system used in the Dictionary of Occupational Titles (DOT).² The two systems, however, are designed to meet different needs and to be used under different circumstances. The DOT system is much more detailed than the system of the Bureau of the Census, and it also calls for many types of distinctions which cannot be made from census information.

Industry

Classification system.--The industrial classification system developed for the 1960 Census of the United States consists of 150 categories, which are

classified into 40 industry groups. However, in this report the classification has been condensed into 41 groups or categories which were numerically significant for the Virgin Islands.

The following list shows the condensed industry groups and categories for which data are presented in this report. Complete information on the industrial classification system used in the 1960 Census is presented in the publication, U.S. Bureau of the Census, 1960 Census of Population, Classified Index of Occupations and Industries, U.S. Government Printing Office, Washington, D.C., 1960. The numbers in parentheses shown in this list after each of the group titles are code designations of the Standard Industrial Classification (SIC).³ (See paragraph below on "Relation to Standard Industrial Classification.")

1. Agriculture (01, 02, 07, except 0713)
2. Forestry and fisheries (08, 09)
3. Mining (10, 11, 12, 13, 14)
4. Construction (15-17)
5. Manufacturing (0713, 19-39)
 - Durable goods (19, 24, 25, 32-39)
 - Nondurable goods (0713, 20-23, 26-31)
6. Beverages (208)
7. Food and kindred products, except beverages (0713, 201-207, 209)
8. Textile products and apparel (22, 23)
9. Other nondurable goods (incl. not spec. mfg.) (21, 26-31)
10. Transportation (40-42, 44-47)
 - Taxicab service (412)
 - Trucking service and warehousing (421-423)
 - Water transportation (44)
 - Air transportation (45)
 - Other (411, 413-415, 417, 46, 47)
11. Communications (48)
 - Utilities and sanitary services (49)
12. Electric light and power (491)
13. Other (492-497)
14. Wholesale trade (50)
 - Retail trade (52-59)
15. Food and dairy products stores and milk retailing (54)
16. General merchandise and limited price variety stores (53)
17. Apparel and accessories stores (56)
18. Furniture, homefurnishings, and household appliance stores (57)
19. Eating and drinking places (58)
20. Hardware, farm implement, and building material retailing (52)
21. Other retail trade (55, 59)
 - Finance, insurance and real estate (60-67)
 - Banking and other finance (60-62, 67)
 - Insurance and real estate (63-66)
 - Business and repair services (73, 75, 76)
 - Auto repair services and garages (75)
 - Other (73, 76)

² See U.S. Department of Labor, Bureau of Employment Security, Dictionary of Occupational Titles, Second Edition, Vols. I and II, U.S. Government Printing Office, Washington 25, D.C., 1949.

³ See Executive Office of the President, Bureau of the Budget, Standard Industrial Classification Manual, 1957. For sale by the Superintendent of Documents, U.S. Government Printing Office, Washington 25, D.C.

- Personal services (70, 72, 88)
30. Private households (88)
 31. Hotels and lodging places (70)
 32. Laundering, cleaning and dyeing services (721, 727)
 33. Other (722-726, 729)
 34. Entertainment and recreation services (78, 79)
Professional and related services (80, 81, 82, 84, 86, 89)
 35. Medical and other health services (80)
 36. Educational services (82, 84)
 37. Welfare, religious, and membership organizations (86)
 38. Legal, engineering, and miscellaneous professional services (81, 89)
Public administration (91-94)
 39. Federal public administration and postal service (91, 94)
 40. Other public administration (92, 93)
 41. Industry not reported (99)

Relation to Standard Industrial Classification.--

The list presented above shows for each industry group used in the Census of Population the code designation of the similar group or groups in the SIC. This relationship is presented here for general information purposes only and does not imply complete comparability. The SIC, which was developed under the sponsorship of the United States Bureau of the Budget, is designed for the classification of industry reports from establishments. These reports are, by their nature and degree of detail, considerably different from industry reports obtained from household enumerations such as the Population Census. As a result, distinctions called for in the SIC cannot be made in the Population Census.

Furthermore, the Population Census data are designed to meet needs different from those met by the establishment data. The allocation of government workers represents perhaps the most basic difference between the two systems. The SIC classifies all government agencies in a single major group. In the system used in the Population Census, however, the category "public administration" includes only those activities which are uniquely governmental functions, such as legislative and judicial activities and most of the activities in the executive agencies. Government agencies engaged in educational and medical services and in activities commonly carried on also by private enterprises, such as transportation and manufacturing, are classified in the appropriate industrial category. For example, persons employed by a hospital are classified in the medical services group, regardless of whether they are paid from private or public funds. Information on the total number of government workers appears in table 23.

Relation to certain occupation groups.--In the classification systems of the Population Census, the industry category "agriculture" is somewhat more inclusive than the total of the two major occupation groups, "farmers and farm managers" and "farm laborers and foremen." The industry category also includes (a) persons employed on farms in occupations such as

truck driver, mechanic, and bookkeeper, and (b) persons engaged in agricultural activities other than strictly farm operations, such as crop dusting or spraying, cotton ginning, and landscape gardening. Similarly, the industry category "private households" is somewhat more inclusive than the major occupation group "private household workers." In addition to the baby sitters, housekeepers, laundresses, and miscellaneous types of domestic workers covered by the major occupation group, the industry category includes persons in occupations such as chauffeur, gardener, and secretary, if they are employed by private families.

Class of Worker

The class-of-worker information refers to the same job as the occupation and industry information. The assignment of a person to a particular class-of-worker category is basically independent, however, of the occupation or industry in which he worked. The classification by class of worker consists of four categories which are defined as follows:

1. Private wage and salary workers.--Persons who worked for a private employer for wages, salary, commission, tips, pay-in-kind or at piece rates.

2. Government workers.--Persons who worked for any governmental unit (Federal or territorial), regardless of the activity which the particular agency carried on.

3. Self-employed workers.--Persons who worked for profit or fees in their own business, profession, or trade, or who operated a farm either as an owner or tenant. Included here are the owner-operators of large stores and manufacturing establishments as well as small merchants, independent craftsmen and professional men, farmers, peddlers, and other persons who conducted enterprises of their own. Persons paid to manage businesses owned by other persons or by corporations, on the other hand, are classified as private wage and salary workers (or, in some few cases, as government workers).

4. Unpaid family workers.--Persons who worked without pay on a farm or in a business operated by a member of the household to whom they are related by blood or marriage. The great majority of unpaid family workers are farm laborers.

The relatively small number of employed persons for whom class of worker was not reported have been included among private wage and salary workers unless there was evidence on the census schedule that they should have been classified in one of the other class-of-worker categories.

Special Editing Procedures

A factor to be considered in the interpretation of these data is that respondents sometimes returned occupation and industry designations which were not sufficiently specific for precise classification. Indefinite occupation and industry returns were frequently assigned, however, to the appropriate category through the use of supplementary information. For example, the name of the employer or the industry return on the census schedule was often of great assistance in determining occupation. The name of the employer

(company name) was used occasionally to assign the proper industrial classification using lists of local industrial establishments. In the coding of indefinite industry returns, helpful information was frequently obtained from other sources regarding the types of industrial activity in the given area or of the given company.

Comparability

Earlier censuses.--The occupational and industrial classification systems used in 1930, 1940, and 1950 are basically the same as those of 1960. There are a number of differences, however, in the title and content for certain items, as well as in the degree of detail shown for the various major groups. The 1940 and 1950 classification by class of worker is comparable with the 1960 classification system.

Other data.--Comparability between the statistics presented in this report and statistics from other sources is frequently affected by the use of different classification systems, as well as by many of the factors described in the paragraphs on comparability with other data in the section on "Employment status." In regard to comparisons between occupation figures from the Population Census and those based on data from government licensing agencies, professional associations, trade unions, etc., comparability may not be as direct as would first appear. Among the sources of difference may be the inclusion in the organizational listing of retired persons or persons devoting all of or most of their time to another occupation, the inclusion of the same person in two or more different listings, and the fact that relatively few organizations attain complete coverage of membership in an occupation field.

INCOME

Definitions

The data on income were derived from answers to the following questions:

1. How much did he earn in 1959 in wages or salary, from all jobs? (Before deductions for taxes, bonds, etc. Include commissions and tips.)
2. How much did he earn in 1959 working in his own business, professional practice, partnership or farm? (Net income after business expenses.)
3. Last year, 1959, did he receive any income from:

Social Security, pensions, or veteran's payments?

Rents, interest, or dividends?

Unemployment insurance or welfare payments?

Any other source not already reported?

If "Yes" - enter amount for entire year.

Information on income for the calendar year 1959 was requested from all persons 14 years old and over. Total income is the sum of the amounts reported for wage or salary income, self-employment income, and other income (items 1, 2, and 3 above). The figures represent the amount of income received before deductions for personal income taxes, Social Security, bond purchases, union dues, etc.

Receipts from the following sources were not included as income: Money received from the sale of property, unless the recipient was engaged in the business of selling such property; the value of income "in kind," such as food produced and consumed in the home or rent-free living quarters; withdrawals of bank deposits; money borrowed; tax refunds; gifts and lump-sum inheritances or insurance payments.

Specific definitions of the three income categories are as follows:

Wage or salary income.--This is defined as the total money earnings received for work performed as an employee. It includes wages, salary, pay from the Armed Forces, commissions, tips, piece-rate payments, and cash bonuses earned.

Self-employment income.--This is defined as net money income (gross receipts minus operating expenses) from a business, farm, or professional enterprise in which the person was engaged on his own account. Gross receipts include the value of all goods sold and services rendered. Expenses include the costs of goods purchased, rent, heat, light, power, depreciation charges, wages and salaries paid, business taxes, etc.

Income other than earnings.--This includes money income received from sources other than wages or salary and self-employment, such as net income (or loss) from rents or receipts from roomers or boarders; royalties; interest, dividends, and periodic income from estates and trust funds; Social Security benefits; pensions; veterans' payments, military allotments for dependents, unemployment insurance, and public assistance or other governmental payments; and contributions for support from persons who are not members of the household, alimony, and periodic receipts from insurance policies or annuities.

This report presents information on income for families and unrelated individuals and for persons 14 years old and over. In the statistics on family income, the combined incomes of all members of each family are treated as a single amount; whereas in the statistics on the income of unrelated individuals and in those on the income of persons 14 years old and over the classification is by the amount of each individual's income.

Although the time period covered by the income statistics is the calendar year 1959, the characteristics of persons and the composition of families refer to the time of enumeration. Thus, the income of the family does not include amounts received by persons who were members of the family during all or part of the calendar year 1959 if these persons no longer resided with the family at the time of the interview. On the other hand, family income includes amounts reported by related persons who did not reside with the family during 1959 but who were members of the family at the time of enumeration. For most of the families, however, the income reported was received by persons who were members of the family throughout 1959.

Median Income

The median income is the amount which divides the distribution into two equal groups, one having incomes above the median, and the other having incomes below

the median. For families and unrelated individuals, the median income is based on the number of families and unrelated individuals reporting on income; whereas for persons the medians are based on the distributions of persons 14 years old and over with income.

Limitations of the Data

The schedule entries for income are frequently based not on records but on memory, and this factor probably produces underestimates, because the tendency is to forget minor or irregular sources of income. Other errors of reporting are due to misunderstanding of the income questions or to misrepresentation.

A possible source of understatement in the income figures was the assumption in the editing process that no income other than earnings was received by a person who reported the receipt of either wage or salary income or self-employment income but failed to report on the receipt of other money income. This procedure was adopted in order to make better use of the information obtained.

The income tables for families and unrelated individuals include in the lowest income group (under \$500) those that were classified as having no 1959 income, as defined in the census. Many of these were living on income "in kind," savings, or gifts, or were newly created families or unrelated individuals, or were families in which the sole breadwinner had recently died or left the household. However, many of the families and unrelated individuals who reported no income probably had some money income which was not recorded in the census.

The income data in this report cover money income only. The fact that many families receive an important part of their income in the form of rent-free housing and of goods produced and consumed at home rather than in money should be taken into consideration in comparing the income data for the Virgin Islands with figures for other areas. In comparing income data for 1959 with earlier years, it should be noted that an increase or decrease in money income between 1949 and 1959 does not necessarily represent a comparable change in real income, because adjustments for changes in prices have not been made in this report.

Comparability

1950 Census.--In 1950, information on income similar to that obtained in 1960 was requested for all persons 14 years of age and over. Although there were slight differences between the two censuses in the wording of the questions, the results are generally comparable.

Income tax data.--For several reasons, the income data shown in this report are not directly comparable with those which may be obtained from statistical summaries of income tax returns. Income, as defined for tax purposes, differs somewhat from the Bureau of the Census concept. Moreover, the coverage of income tax statistics is less inclusive because of the exemptions of persons having small amounts of income. Furthermore, some income tax returns are filed as separate returns and others as joint returns; and, consequently, the income reporting unit is not consistently either a family or a person.

COLLECTION AND PROCESSING OF DATA

The collection and processing of data in the 1960 Census followed the same general pattern as in 1950. The principal points of difference between the two censuses are to be found in the content and design of the questionnaire and in the more extensive use of machines for editing the data recorded on the schedules.

FIELD ENUMERATION

In 1960, a separate questionnaire was used for each household, whereas in 1950, each schedule contained 30 lines and the enumerator was instructed to enumerate one household after another, utilizing each line for a person. In terms of content, the 1960 schedule included a question on number of children ever born which had not been asked previously in the Virgin Islands. Two items which were included on the 1950 schedule were dropped in 1960. These were citizenship of the foreign born and veteran status of males 14 years old and over.

The enumeration began on April 1, 1960, and was completed in July. During the last week in March, the enumerators were given approximately 16 hours of training, which included instruction on the individual schedule items, a discussion of enumeration procedures, and several practice interviews. The information for each household was obtained from the head or other responsible member of the household by direct interview.

Field review.--During the first week of the enumeration, the crew leader was instructed to check each enumerator's work to make sure that the enumerator was performing his duties properly and to provide additional instruction where necessary. If the results of this first review showed that the enumerator needed further supervision and training, additional reviews were scheduled during the enumeration period. A final review of each enumerator's work was conducted upon completion of his assignment. In addition to checking individual items on the schedule, the completeness of coverage was checked in various ways. One check included an advance listing by the crew leader of a sample of the addresses in each district, and a comparison of these addresses with the list of households reported by the enumerator.

MANUAL CODING AND EDITING OF SCHEDULES

After the schedules were assembled and checked for completeness in the field, they were sent to a central processing office in Jeffersonville, Ind., for manual coding and editing. The coding and editing operation generally provided the final opportunity to correct errors in the census returns by hand before the data were transferred to punch cards. For some schedule items, it was necessary to hand code the

entries made by the enumerator for each person on the schedule. For other items, the most common entries were precoded on the schedule and manual coding was required only for a small portion of the returns. Still other items were completely precoded and required manual editing and coding only for nonresponses and multiple entries.

One of the coding problems that required the manual processing of every schedule was the coding of the relationship item. The main purpose of this operation was to assign a code to each member of the household, indicating his relationship to the head of the household, and to identify each family group within the household. Persons enumerated in group quarters were assigned special codes to indicate the type of group quarters (institution or other) and the relationship of the individual to the head of the unit, such as lodger, nurse, inmate, etc.

Codes were also assigned for country of birth. The most common entries--Virgin Islands of the United States, Puerto Rico, and the United States--were precoded on the schedule. For persons born elsewhere, the enumerator wrote in the name of the territory or foreign country; for example, Canada, the Dominican Republic, Mexico. In such cases, the coder had to refer to a code list of foreign countries and enter the proper code.

A specialized group of clerks coded the entries for occupation and industry. The class-of-worker

entry was edited for consistency with the occupation and industry reported.

All of the manual coding work was verified completely before the schedules were forwarded to Washington for card punching.

MACHINE PROCESSING

After the manual coding and editing operation was completed, the information for each person was transferred to a punch card. The cards were then processed through a series of mechanical edits to correct inconsistencies and unacceptable codes. For example, the entry for highest grade of school completed was compared with the age of the person and impossible combinations were corrected in accordance with a list of acceptable grades for each year of age. An employment status recode was assigned to each person 14 years old and over based on various combinations of entries for employment status, occupation, and date last worked. Other consistency edits which were handled by machine involved income and employment status; relationship, sex, and marital status; education and school attendance.

When the machine editing process was completed, the cards were tabulated and the tabulated data were posted to worksheets. The final tables were typed from the worksheets and reproduced by offset printing for publication.

ACCURACY OF DATA

SOURCES OF ERROR

Human and mechanical errors occur in any mass statistical operation such as a decennial census. Such errors include failure to obtain required information from respondents, obtaining inconsistent information, recording information in the wrong place or incorrectly, or otherwise producing inconsistencies between entries for interrelated items on the field documents. Errors also occur in the clerical coding and editing operations and in the machine processing of the data.

Careful efforts are made in every census to keep the errors in each step at an acceptably low level. Review of the enumerator's work, verification of manual coding and editing, and checking of the tabulated figures tend to reduce the effects of the errors in the census data.

EDITING OF UNACCEPTABLE DATA

Regardless of the operating procedure that is followed, the desired end is to produce a set of

statistical tables that describe the population as accurately and clearly as possible. In keeping with this objective, certain unacceptable entries on the 1960 Census schedules were edited.

Allocations, or assignments of acceptable codes in place of unacceptable entries, were needed most often where an entry on a given item was lacking or where the information reported for a person on that item was inconsistent with other information for the person. As in earlier censuses, the general procedure for changing unacceptable entries was to assign an entry for such a person that was consistent with entries for other persons with similar characteristics. Thus, a person who was reported as a twenty-year-old son of the household head, but for whom marital status was not reported, was assigned a marital status from a marital status distribution for all sons (in the same age group) of household heads. It was believed that the assignment of acceptable codes in place of blanks or unacceptable entries would enhance the usefulness of the data.

GENERAL POPULATION CHARACTERISTICS

Virgin Islands of the United States

LIST OF TABLES

[Page numbers listed here omit the area prefix number which appears as part of the page number for each page. The prefix for this area is 55]

Table	Page
5.--Population by race, nativity, and sex, for the Virgin Islands of the United States, urban and rural, 1950 and 1960, and for the Virgin Islands, 1917 to 1940.....	12
6.--Age by race and sex, for the Virgin Islands of the United States, urban and rural: 1960 and 1950.....	13
7.--Nativity and country of birth, for the Virgin Islands of the United States, urban and rural: 1960.....	15
8.--School enrollment, by race and age, for the Virgin Islands of the United States, urban and rural: 1960.....	15
9.--School enrollment, by age, for the Virgin Islands of the United States: 1917 to 1960.....	16
10.--School enrollment, by level of school and race, for the Virgin Islands of the United States, urban and rural: 1960.....	16
11.--Year of school in which enrolled, by single years of age and sex, for the Virgin Islands of the United States, urban and rural: 1960.....	16
12.--Years of school completed by persons 14 to 24 years old not enrolled in school, by single years of age and sex, for the Virgin Islands of the United States, urban and rural: 1960.....	18
13.--Years of school completed by persons 14 years old and over, by race and sex and by age and sex, for the Virgin Islands of the United States, urban and rural: 1960.....	19
14.--Marital status, by race and sex, for the Virgin Islands of the United States, urban and rural, 1960, and for the Virgin Islands, 1950 and 1940.....	21
15.--Marital status and presence of spouse, by age and sex, for the Virgin Islands of the United States, urban and rural: 1960.....	22
16.--Married couples, families, and unrelated individuals, by race of head, for the Virgin Islands of the United States, urban and rural: 1960 (Figures for total, urban, and rural also shown for 1950.)....	23
17.--Household relationship, by race, for the Virgin Islands of the United States, urban and rural, 1960, and for the Virgin Islands, 1950.....	23
18.--Children ever born to women ever married, by age and race of woman, for the Virgin Islands of the United States, urban and rural: 1960.....	24
19.--Employment status, by race and sex, for the Virgin Islands of the United States, urban and rural: 1960.....	26
20.--Employment status, by sex, for the Virgin Islands of the United States: 1960 and 1950.....	26
21.--Labor force status, by age, race, and sex, for the Virgin Islands of the United States, urban and rural: 1960.....	27
22.--Weeks worked in 1959, by race, for the Virgin Islands of the United States, urban and rural: 1960.....	28
23.--Persons employed in agriculture and in nonagricultural industries, by class of worker, race, and sex, for the Virgin Islands of the United States, urban and rural: 1960.....	28
24.--Occupation group of employed persons, by race and sex, 1960, and by sex, 1950, for the Virgin Islands of the United States, urban and rural.....	29
25.--Industry group of employed persons, by race and sex, 1960, and by sex, 1950, for the Virgin Islands of the United States, urban and rural.....	32
26.--Income in 1959 of families and unrelated individuals, by race, for the Virgin Islands of the United States, urban and rural: 1960.....	34
27.--Income in 1959 of persons, by race and sex, for the Virgin Islands of the United States, urban and rural: 1960.....	35
28.--Income in 1959 and 1949 of persons, for the Virgin Islands of the United States, urban and rural: 1960 and 1950.....	36
29.--Age by race and sex, 1960, and age by sex, 1950, for islands and places of 2,500 or more.....	36
