Explanation of Symbols

The following symbols and abbreviations are used in tables throughout this report:

“ - ”	Zero or a percent that rounds to less than 0.1.
“...”	Not applicable/Not available
D	Withheld to avoid disclosing figures for individual establishments. Data are included in higher-level totals.

Chapter 1

POPULATION

SUMMARY OF POPULATION STATISTICS

The population of the U.S. Virgin Islands in the 2000 census was 108,612. This represented an increase of just over 6,800 individuals since the 1990 Census. The Territory's population in 2002 exceeded 110,000. Based on the 2000 Census, 49.0 percent of the population resided in St. Croix, 47.1 percent in St. Thomas, and 3.9 percent in St. John. The Sion Farm sub-district, which has the largest concentration of residents on St. Croix, increased by 14.2 percent between 1990 and 2000. The Charlotte Amalie sub-district has the largest concentration of residents on St. Thomas. However, the population in this sub-district decreased by 8.1 percent from 1990 to 2000. In St. John, most of the residents live in the Cruz Bay sub-district. Between 1990 and 2000, the population in the Cruz Bay sub-district increased by 11.1 percent. The Coral Bay population, which is relatively small, had a drastic increase of 78.8 percent during this same time.

The U.S. Virgin Islands' population median age has steadily increased since 1995. The median age in 1995 was 30.8 compared to 35.1 in 2002. In 2002, the median age was 36.8 in St. Thomas, 34.0 in St. Croix, and 32.7 in St. John.

Regarding gender and marital status, there was a higher percentage of males than females who reported being married during the 1995 to 2002 time period. Approximately 51.1 percent of males who were 15 years and older reported being married in 2002, while only about 41.2 percent of same-aged females reported being married. This finding might be attributed to the fact that high immigrant receiving countries, such as the U.S. Virgin Islands, often have resident males, who have immigrated, but still have wives residing in their country of origin.

From 1990 to 2000, around half of the U.S. Virgin Islands' population was born in the Territory. In 2002, approximately 36 percent of the U.S. Virgin Islands' population reported being born in other Caribbean islands with the largest influx from St. Kitts and Nevis.

During 1997 to 2001, a large percentage of immigrants admitted to the Territory were from the Dominican Republic. From 1997 to 1999, the representation of Dominican Republics in the immigrant population increased from 23.8 to 41.4. In 2002, their representation in the immigration population declined to approximately 29 percent.

Table 1.1 **Population of the U.S. Virgin Islands: 1835 to 2002**

Year	Population	Year	Population
2002	110,026	1968	55,700

Figure 1.2 Population by Island: 2002

Population by Geographic Location

St. Croix

- Between 1990 and 2000, the population of St. Croix increased by 6.2 percent.
- The Christiansted sub-district population decreased by 10.4 percent from 1990 to 2000.
- During this same time, the Frederiksted sub-district population decreased by 7.4 percent.
- The Sion Farm sub-district population increased by 14.2 percent from 1990 to 2000. This sub-district continued to have the highest population concentration on St. Croix, with 25.5 percent of the population residing in this sub-district in 2000.

St. John

- Between 1990 and 2000, St. John's population grew by 19.8 percent.
- The Coral Bay sub-district increased by 78.8 percent during this same time.
- In 2000, Cruz Bay sub-district continued to have the largest concentration of residents, approximately 65.4 percent of the population.

St. Thomas

- The St. Thomas population increased by 6.3 percent between 1990 and 2000. Areas with the most significant growth since 1990 included the West End and Northside sub-districts.
- The Charlotte Amalie sub-district had the highest population concentration in 2000, approximately 37.0 percent of residents. However, this sub-district experienced an 8.1 percent decline in population from 1990 to 2000.
- From 1990 to 2000, Charlotte Amalie town also declined in residency by 10.8 percent.

Population by Age

- From 2001 to 2002, the Territory's population continued to get older, on average, which may be attributed to more people living longer, fewer births, or an increase in net adult immigration. The median age of the population in 1995 was 30.8. It increased to 33.4 in 2000 and then to 35.1 in 2002.
- St. Croix had the lowest population median age of the three islands from 1990 to 2001. The median age in St. Croix rose slightly above St. John's in 2002.
- From 1990 to 2001, St. John had the highest median age in the Virgin Islands. St. John's median age decreased to 32.7 in 2002, which was lower than the median age in St. Thomas and St. Croix.
- The median population age in St. Thomas has steadily increased since 1990. In 2002, St. Thomas had the highest median-aged population in the Territory, with a median age of 36.8.

Household Relationship, Virgin Islands

- Between 1995 and 2002, the number of householders steadily increased in the U.S. Virgin Islands.
- Of the total householders in the Territory, 65 percent or more were family householders in 2002, and more than 50 percent of family householders reported having a spouse.

Household Relationship, St. Croix

- St. Croix had the highest percentage of family householders in 2002, compared to the other two islands.
- From 1990 to 2002, the average household size has declined from 3.8 persons to 2.7 persons.
- In 2002, 54.4 percent of St. Croix householders were married.

Household Relationship, St. John

St. John had a higher percentage of family householders living with a spouse in 2002 than did St. Thomas or St. Croix.

Table 1.5C **Household Relationship, St. John: 1990, 1995, 2000 to 2002**

 U.S. Census Bureau, 1990 Census of Population, Social and Economic Characteristics.

Marital Status by Sex

- Between 1990 and 2002, a higher percentage of males who were 15 years of age and older reported being married than same-aged females, which might be explained by the U.S. Virgin Islands being a high immigrant receiving country. Thus, some males have immigrated but have wives still residing in their country of origin.
- In 2002, 9.0 percent of women, compared to 8.4 percent of males, were divorced.

Fertility by Age

Children ever born per 1,000 women decreased for women, married or unmarried, in the 15 to 24 year and 25 to 34 year age groups, from 1990 to 2000. In contrast, children ever born per 1,000 women increased slightly during that same time for both married and unmarried women in the 35 to 44 year age group.

**Table 1.7B Number of Children by Age of Mother, Virgin Islands:
1990, 1995 and 2000**

Figure 1.3 Birthplace by Location, Virgin Islands: 2001 and 2002

Birthplace, Virgin Islands

- Across all years considered, approximately half of the U.S. Virgin Islands’ population reported being born in the Territory.
- From 1990 to 2002, around a third of the Territory’s population reported being born in other Caribbean islands, with the largest percentage born in St. Kitts and Nevis.
- Persons who reported being born in the United States accounted for approximately 11 to 15 percent of the U.S. Virgin Islands’ population in 1990, 1995, and 2000 to 2002.

Figure 1.4 Birthplace by Location, St. Croix: 2001 and 2002

Birthplace, St. Croix

- From 1990 to 2002, the percent of the St. Croix population that reported being born in the Territory ranged from 49.8 to 52.0 percent.
- During that same time period, 8.6 to 13.6 percent of the St. Croix population reported being born in the United States, 4.8 to 6.6 percent was born in Puerto Rico, 22.6 to 33.6 percent was born in other Caribbean islands, and less than 3.0 percent reported being born elsewhere.

Figure 1.8 Selected Immigrant Status, Virgin Islands: 1986 to 2002

Non-immigrants Selected by Class of Admission

From 1996 to 2002, the largest class of non-immigrants visiting the Territory annually was temporary visitors for Business and Pleasure. This group consisted of more than 93 percent of all non-immigrants entering the U.S. Virgin Islands during the 1996 and 2002 time period.

Chapter 2

VITAL STATISTICS

SUMMARY OF VITAL STATISTICS

The U.S. Virgin Islands experienced a steady decline in the birth rate over the years 1997 to 2000. Between 2000 and 2001, the birth rate increased from 15.5 to 16.2, which was a 4.5 percent change from 1999. The infant mortality rate, which is a relatively small number, was 8.3 per 1,000 population in 2000 and it declined to 3.4 in 2001.

The majority of all babies born during the years 1998 and 2002 were born to mothers aged 20 to 29 years. The percent of births to mothers under the age of 20 has steadily declined over the years. In 1998, 17.4 percent of births were to mothers under the age of 20, while in 2002 it was 14.9.

The death rate fluctuated between 1997 and 2001 reaching a low of 5.4 deaths per 1,000 population in the year 1998 and a high of 6.0 deaths per 1,000 population in 1999. From 2000 to 2001, the death rate declined 3.4 percent. As expected, deaths generally increased with age. In 2001, 58.4 percent of deaths were to individuals aged 65 years or over and 3.9 percent were to individuals under the age of 20 years. During the years of 1998 and 2001, men tended to die at a younger age than did women. In 2001, 26.8 percent of male deaths were among males under the age of 50 years, while 16.2 percent of female deaths were to females under the age of 50 years. The top two leading causes of death between 1999 and 2001 were heart disease and neoplasm, commonly referred to as tumor.

The number of marriages occurring in the St. Thomas/St. John district has generally increased every year since 1976. In St Croix, the number of marriages has remained more stable over the years. Of the 4,087 U.S. Virgin Islands marriages granted in 2001, 84.7 percent occurred in the St. Thomas/St. John district and 15.3 percent in the St. Croix district.

The number of divorces in the Territory generally declined over the 1980 to 1987 time period. The decline in divorces was especially observed in the St. Thomas/St. John district, which experienced 230 divorces in 1980 and a low of 71 in 1987. St. Croix experienced more variability in the frequency of divorces during those same years. Overall, the number of divorces decreased with years of marriage. For instance, in 1987 there were 77 divorces granted to couples married 4 years or less and 29 divorces to couples married 20 years or more.

Table 2.1 **Births and Deaths, Virgin Islands: 1997 to 2001**

Year	Population	Number Registered			Rates		
		Births	Deaths	Infant Deaths	Births	Deaths	Infant Mortality
2001	109,344	1,774	612	6	16.2	5.6	3.4
2000	108,612	1,685	630	14	15.5	5.8	8.3
1999	109,870	1,773	657	17	16.1	6.0	9.6
1998	112,830	1,918	613	19	17.0	5.4	9.9
1997	112,863	2,128	608	22	19.4	5.5	10.8

Notes: 1. Birth and death rates are per 1,000 mid-year population.

2. Infant mortality rate is number of infant deaths per 1,000 live births.

Figure 2.1 **Virgin Islands Birth Rates: 1997 to 2001**

Births and Deaths

- The birth rate decreased between 1997 and 2000, but increased from 15.5 live births per 1,000 population in 2000 to 16.2 in 2001. The infant mortality rate steadily declined between 1997 and 2001.
- The death rate varied across the years reaching a high of 6.0 deaths per 1,000 population in 1999 to a low of 5.4 in 1998.

Births by Month

- Across all years the frequency of live births was lower in the first six months than the last six months.
- There were 4.1 percent fewer live births in 2002 than in 2001.

Births by Age of Mother

- Approximately half of all live births in 2002 were to mothers between the ages of 20 to 29 years.
- In 2002, 14.9 percent of live births were to mothers less than 20 years of age.

Figure 2.2 Registered Live Births, Virgin Islands: 1998 to 2002

Births by Birth Weight

- The Virgin Islands Department of Health generally reports birth weight statistics using grams as opposed to pounds. Birth weights are also categorized as very low weight, low weight, average weight, and high weight.
- A newborn with a very low birth weight generally weighs 1500 grams or less, which equates to 3 pounds 5 ounces or less. Newborns with low weight weigh between 1501 to 2500 grams, an equivalent of 3 pounds 5 ounces to 5 pounds 8 ounces. Average weight is between 2501 to 4000 grams, which is approximately 5 pounds 8 ounces to 8 pounds 13 ounces. Babies with high weight generally weigh in excess of 4000 grams.
- In 2001, 84.3 percent of babies born in the Territory weighed between 2501 and 4000 grams.
- In 2001, 9.5 percent of the Territory's live births involved underweight babies (2500 grams or less).

Deaths by Age

- With the exception of the less than 1 year age group, the number of deaths generally increased with age.
- Individuals 70 years of age or over constituted nearly 50 percent of all registered deaths between 1998 and 2001.

Figure 2.3 Registered Deaths by Age, Virgin Islands: 2000 and 2001

Deaths by Age and Sex

- From 1998 to 2001, males had a higher frequency of deaths than did females.
- Male deaths were more represented in the younger age categories than female deaths. For instance, 26.8 percent of male deaths in 2001 occurred before the age of 50, compared to 16.2 percent of female deaths.

Leading Causes of Death

- Table 2.9 illustrates the seven leading causes of death in the Territory from 1999 to 2001. Of the 612 deaths that occurred in the Territory in 2001, 458, or 74.8 percent, of those deaths were a result of the seven leading causes of death.
- Heart disease accounted for 29.6 percent of deaths, malignant and benign neoplasm, commonly referred to as tumor, accounted for 17.3 percent of deaths, accidents of all types accounted for 7.8 percent of deaths, cerebrovascular disease, a term that covers acute stroke and other diseases that may lead to stroke, like aneurysm accounted for 7.4 percent of deaths, diabetes mellitus accounted for 5.1 percent of deaths, homicide accounted for 4.6 percent and cirrhosis of the liver accounted for 3.1 percent of deaths
- From 1999 to 2001, the number one cause of death was heart disease. Neoplasm, commonly referred to as tumor, was the second highest reason for death across the years considered.
- The number of deaths caused by heart disease declined 12.1 percent and the number neoplasm deaths declined 13.8 percent from 2000 to 2001.

Marriages and Divorces

- The number of marriages in the St. Thomas/St. John district increased between the years 1981 and 2001 from 620 to 3,460 marriages. The majority of the 3,460 marriages performed involved couples who were not residents of the Territory.
- In the St. Croix district, the number of marriages fluctuated over the years 1981 to 2001, with a high of 627 marriages in 2001 and a low of 441 marriages in 1998.
- In 2001, 84.7 percent of the Territory's marriages occurred in the St. Thomas/St. John district, compared to 15.3 percent in St. Croix.
- From 1980 to 1987, the frequency of divorces was higher in St. Croix than St. Thomas/St. John. Prior to that time, St. Thomas/St. John tended to experience a higher number of divorces than did St. Croix.

Divorces by Duration of Marriage

- There was a general pattern of decline in the total number of divorces granted over the 1977 to 1987 time period. About 30 percent of divorces in 1987 were to couples married less than five years.
- In general, the frequency of divorces declined with the duration of marriage. An exception to this pattern was the 20 years or more category, which for the majority of years, experienced a higher number of divorces than the previous category of 15 to 19 years of marriage.

Chapter 3

EDUCATION

SUMMARY OF EDUCATION

From 1998 to 2002, the U.S. Virgin Islands experienced a decline in the number of students enrolled in public schools. For example, 20,939 students were enrolled in U.S. Virgin Islands' public schools in 1998 and by 2002 the number of students had dropped to 17,804. The percent decline in public school enrollment from 2001 to 2002 varied by island, with a 3.8 percent decline in St. Croix, 6.3 percent decline in St. Thomas, and 17.6 percent decline in St. John.

While public school enrollment declined, non-public school enrollment has increased since 2000. In fact, St. Thomas experienced a 4.7 percent increase; St. Croix had a 3.7 percent increase; and St. John there was a 1.8 percent increase in non-public school enrollment from 2001 to 2002.

Examining public school enrollment by grade level suggests that from 1998 to 2002 the number of students per grade tended to increase through the 7th grade and then experienced a general decline. For example, in 2002 there were 1,065 students in Kindergarten, 1,764 students in 7th grade, and 1,227 students in 12th grade. The pattern of enrollment by grade was different for non-public schools. From 1998 to 2002, non-public school enrollment tended to decline with grade level with the highest concentration of students in pre-Kindergarten and the lowest frequency of students in Grade 12.

From 2001 to 2002, the Territory experienced a 3.0 percent increase in the number of public school teachers and a 3.1 percent decline in teacher aides. In St. Thomas, the number of Head Start students increased 25.4 percent from 2001 to 2002, but the number of Head Start staff only increased 1.6 percent during this same time period. St. John experienced a 10.0 percent increase in the number of Head Start students, but only an 8.3 percent increase in Head Start staff. St. Croix was the only island to experience a decrease in the number of Head Start students and staff between 2001 and 2002. The number of Head Start students in St. Croix declined 2.6 percent, while the number of Head Start staff declined 8.2 percent from 2001 to 2002.

An examination of school dropout statistics by gender indicates that a greater number of males than females were school dropouts. There is some indication that the gender gap in school dropouts is narrowing. For example, the number of female dropouts increased 5.8 percent from 1998 to 1999, while the number of male dropouts declined 19.6 percent during this same time period. From 1997 to 1999, St. Croix and St. Thomas had the highest frequency of dropouts in the 9th grade.

Enrollment at the University of the Virgin Islands has increased since 2000. Overall, the University of the Virgin Islands experienced a 10.2 percent increase in enrollment from 2001 to 2002. An increase in enrollment was especially observed at the graduate level. There were 187 graduate students in 2001 and by 2002 the number had increased to 280 students, which was a 49.7 percent change. Undergraduate enrollment went from 2,104 full time students in 2001 to 2,244 full time students in 2002. This represented a 6.7 percent change.

The number of Master, Bachelor, and Associate degrees conferred in 2002 all declined from the previous year. Overall, there was a 15.1 percent decline in the number of degrees awarded in 2002. Of the 45 Associate of Art degrees conferred in 2002, 51.1 percent were Business Management degrees. In 2002, Business Administration and Elementary Education degrees combined constituted just over half of the awarded Bachelor degrees.

The 2002 data on the highest level of educational attainment of 25-years-and-older Virgin Islanders suggested that 27.8 percent of the population had attended college and 61.2 percent had graduated from high school. When educational attainment was examined by gender, it was found that the percent of non-high school graduates was higher for the male population than for the female population (39.2 percent compared to 35.1 percent, respectively). U.S. Virgin Islands' males were also less likely to have attended college than were their female counterparts (22.6 percent compared to 32.2 percent, respectively).

Public and Non-Public School Enrollment

- There has been a general decline in school enrollment since 1998. There were 24,359 students enrolled in 2002 compared to 27,005 students in 1998, which represented a 9.8 percent change in school enrollment
- Just over half of the Territory’s enrolled students were in St. Croix, 45.6 percent were in St. Thomas, and 2.0 percent were in St. John during the school year of 2002.

Figure 3.1 Public and Non-Public School Enrollment, Virgin Islands: 1998, 1999, 2001 and 2002

Public School Enrollment, St. Croix

- The number of St. Croix students attending public schools declined 3.8 percent from 2001 to 2002.
- Over half of the students (55.3 percent) attending public school in St. Croix were in elementary school in 2002.

Non-Public School Enrollment, St. Croix

- There has been a steady increase since 2000 in the number of St. Croix students enrolled in non-public schools.
- In 2002, 3,355 students were enrolled in non-public schools, which was a 3.7 percent increase from the previous year.
- From 1998 to 2002, the St. Croix non-public school with the highest student enrollment was Country Day.
- Enrollment figures were not recorded for Academy of W.I., Aggie’s Elementary School, Kiddie Castle, and Moravian School due to the fact that these institutions were not operating as of September 2000.

**Public School Enrollment, St. John/
St. Thomas**

- Public school enrollment in St. John declined 17.6 percent from 2001 to 2002.
- Over two-thirds of St. John students (68.6 percent) enrolled in public schools were at the elementary level in 2002.
- The frequency of St. Thomas students enrolled in public schools has declined since 1999. In 2002, there were 8,086 public school students, which was a 6.3 percent decline from the previous school year.
- Approximately half of all public school students in St. Thomas were at the elementary level during the 2002 school year.

Figure 3.3 Public School Enrollment, St. Thomas: 1998 to 2002

**Non-Public School Enrollment, St. John/
St. Thomas**

- There has been an increase in the number of students attending St. John non-public schools since 2000. About 55 percent of non-public students in St. John were enrolled at Pine Peace in 2002, while 45 percent were enrolled at St. John Christian Academy.
- The number of St. Thomas students enrolled in non-public schools increased throughout the 1998 to 2002 time period.
- The enrollment of St. Thomas non-public school students increased 4.7 percent from 2001 to 2002.
- The highest represented enrollment of St. Thomas non-public school students was at Antilles (17.7 percent), followed by All Saints (15.0 percent).

Note: Data reflect beginning of school year enrollment.

Special Education and Limited English Proficiency numbers were included in the various grade levels.

Transitional classes consist of students who did not meet the promotion criteria.

Multiage classes consist of students at different age ranges.

The Transitional and Multiage programs began in 2001 thus no future data recorded.

Total enrollment for 2000 could not be computed since two St Thomas non-public schools did not submit their 2000 enrollment information to the Department of Education.

Source: U. S. Virgin Islands Department of Education.

School Enrollment by Grade Level

- In 1998 and 1999, the grade level in the Territory with the highest number of students was 9th grade.
- For the years 2000 to 2002, the grade level with the highest number of students enrolled was in 7th grade.
- Special Education totals reported were included in individual grade levels for 2002. The overall number of students enrolled in Special Education Classes for 2002 was 1,497.

Public School Enrollment by Grade Level

- During the 1998 and 2001 school years, the most represented grade level for public schools in the Territory was 9th grade.
- In 2002, Grade 7 had the highest concentration of public school students.

Non-Public School Enrollment by Grade Level

- The frequency of students enrolled in the Territory's non-public schools generally declined with grade level.
- As an example, there were 802 students in pre-Kindergarten compared to 237 students in Grade 12 in 2002.

Number of Head Start Pupils by Island

In 2002, there were 25.4 percent more Head Start pupils in St. Thomas and 10.0 percent more in St. John than in 2001, while St. Croix had 2.6 percent fewer Head Start students during the same time period.

Number of Head Start Staff by Island

St. Croix experienced an 8.2 percent reduction in Head Start staff from the 2001 to the 2002 school year, while St. Thomas and St. John had a slight increase in the number of Head Start staff.

Figure 3.5 Number of Head Start Staff by School Year and Island, Virgin Islands: 1998 to 2002

Number of Public High School Graduates

The number of students graduating from the Territory's public high schools steadily declined during the 2000 to 2002 time period.

Number of Public School Teachers

From 1998 to 2001, the number of U.S. Virgin Islands' public school teachers declined. There was a 3 percent increase in the number of public school teachers in the Territory from 2001 to 2002.

Student-Teacher Ratio, St. Croix

- St. Croix's overall student-teacher ratio steadily declined since the 1999 school year.
- In 2002, St. Croix had about 13 students for every teacher at the elementary school level.
- At the secondary school level, St. Croix had about 11 students for every teacher in 2002.

Student-Teacher Ratio, St. John/St. Thomas

- St. John's student-teacher ratio fluctuated during the 1998 to 2001 time period, but reached a low of about 7 students for every teacher in 2002.
- The student-teacher ratio peaked in St. Thomas in 1999 (14.1) and reached a low of 11.7 in 2002.

Public School Dropouts by Sex and Grade

- From 1997 to 1999, the highest number of U.S. Virgin Islands' school dropouts were in 9th grade.
- Since the 1997 school year, there has been a higher number of male than female school dropouts.

Figure 3.11 Full Time and Part Time Enrollment, University of the Virgin Islands: 1998 to 2002

Number of Degrees Conferred, University of the Virgin Islands: 1998 to 2002

- The number of degrees awarded at the University of the Virgin Islands fluctuated across the 1998 to 2002 academic years, but reached a low of 286 in 2002 and a high of 353 in 1999.
- Approximately 74 percent of the University of the Virgin Islands' degrees awarded were Bachelor degrees, 16.1 percent were Associate degrees and 10.1 percent were Master degrees.

Educational Attainment

- In 2002, 61.2 percent of Virgin Islanders who were 25 years of age or over had a high school degree, while 27.8 percent had attended college.
- U.S. Virgin Islands' women, aged 25 years and over, were more likely to have received a high school diploma (64.8 percent) than the Territory's men (56.9 percent).
- U.S. Virgin Islands' women were also more likely to have attended college (32.2 percent) than their male counterpart (22.6 percent).

Chapter 4

**LABOR FORCE AND
EMPLOYMENT**

SUMMARY OF LABOR AND EMPLOYMENT

The size of the U.S. Virgin Islands' labor force remained fairly stable between 2001 and 2002. According to the Virgin Islands Department of Labor, 49,670 individuals in were the labor force in 2001 and 49,430 in 2002, which constituted less than a 1 percent change across the two years. The majority of the labor force was in the St. Thomas/St. John district.

The unemployment rate generally increased since 1998, especially between 2001 and 2002 when the unemployment rate increased 22.5 percent. From 1998 to 2002, St. Croix experienced a higher unemployment rate than St. Thomas/St. John. As an example, the unemployment rate in the St. Thomas/St. John district was 7.2 percent in 2002, while it was 10.7 in St. Croix.

Based on the 2002 Virgin Islands Community Survey, the U.S. Virgin Islands' labor force consisted of 82.0 percent Blacks, 9.8 percent Whites, and 8.2 percent non-Blacks and non-Whites. A higher percentage of the male labor force, compared to the female labor force, was aged 55 years and older. For instance, 23.3 percent of males in the labor force were 55 years of age or over compared to 16.0 percent of the females in the labor force. On the other hand, a higher percent of the female labor force in 2002 was located in the lower age categories than was the male labor force. In 2002, 36.0 percent of the female labor force and 30.9 percent of the male labor force was 34 years of age or younger.

Across all years considered (1995 and 2000 to 2002), private wage or salary workers represented the majority of the Territory's employment. In 2002, 61.9 percent of workers in the Territory were employed by private companies or businesses. Persons employed in St. Croix were more represented in this category than on St. Thomas and St. John. In St. Croix, 64.0 percent of workers were classified as private wage or salary workers compared to 57.7 percent on St. John and 60.2 percent on St. Thomas. St. Croix also had a higher percent of employed persons classified as government workers than St. Thomas and St. John. In 2002, 27.5 percent of the St. Croix workers were classified as government workers, while government workers constituted 27.1 percent of St. Thomas workers and 21.1 percent of St. John workers. The amount of workers classified as self-employed in 2002 was 21.1 percent in St. John, 12.6 percent in St. Thomas, and 8.5 percent in St. Croix.

The real value of the minimum wage has steadily declined since 1997. Based on 2000 constant dollars, the minimum wage rate in 1997 was \$5.53 and by 2000 it had declined to \$5.15. The minimum wage rate, using 2000 constant dollars, was highest in 1968 when it was \$7.92.

The Lawyers had the highest average annual salary in the Territory during the 1998 to 2001 time period. The other occupations at the high end of the salary scale were those classified as education administrator, general manager and top executive, financial managers, and pharmacists. The occupations at the lower end of the salary scale included those associated with food and beverage preparation, cleaning and building services, and personal services.

Labor Force by Race, Sex, and Age

- Based on the 2002 Virgin Islands Community Survey, 82.0 percent of the Territory’s labor force was Black, 9.8 percent White, and 8.2 percent was either Asian, American Indian, or Pacific Islander in 2002.
- Overall, 4.5 percent of the U.S. Virgin Islands labor force was under the age of 20 years in 2002. When examined by gender, 5.3 percent of females in the labor force was under the age of 20 years, compared to 3.6 percent of males in the labor force in 2002.
- In 2002, a greater percentage of males aged 65 years and over reported being in the labor force than did females (5.2 percent compared to 2.6 percent, respectively).

Figure 4.2 Labor Force by Sex, Virgin Islands: 1995, 2000 to 2002

Class of Worker by Island

- About 62 percent of the U.S. Virgin Islands' labor force was classified as a private wage or salary worker in 2002.
- In 2002, government workers constituted 27.1 percent of the Territory's labor force and self-employed represented 11.0 percent of the labor force.
- Comparing the Islands, St. Croix had 64.0 percent of the labor force in private wage or salary in 2002, compared to 57.7 percent in St. John and 60.2 percent in St. Thomas.
- St. Thomas and St. Croix both had a higher percent of the 2002 labor force classified as government worker than did St. John. In 2002, 21.1 percent of St. John's labor force was classified as self-employed, compared to 12.6 percent in St. Thomas and 8.5 percent in St. Croix.

Minimum Wage

- The Territory’s minimum wage is the same as the Federal minimum wage. The years listed in the table are the years the Fair Labor Standards Act was amended to raise the minimum wage.
- Table 4.7 shows the actual minimum wage (Current Dollars) and the relative value of the minimum wage (Constant Dollars) in 1996, 1998 and 2000 dollars adjusted for inflation using the CPI-U.
- Thus, the minimum wage in 1938 (\$0.25) equals a value of \$3.05 based on 2000 dollars.
- Based on current dollars, the minimum wage remained at \$5.15 from 1997 to 2000. However, adjusting this value for inflation, the minimum wage actually declined steadily since 1997.

Chapter 5

STD/HIV

SUMMARY OF STD/HIV

This chapter presents the descriptive statistics for sexually transmitted diseases, AIDS, and HIV in the U.S. Virgin Islands, as well as trends over time.

The number of reported STD cases increased from 229 cases in 2001 to 346 cases in 2002, which represented a 51.1 percent increase. Of the 346 reported STD cases in 2002, 87 percent of the cases were associated with women. During this same year, about 60 percent of the cases were related to Chlamydia and around 14 percent of the reported cases were associated with Gonorrhea.

There has been a steady increase in the number of reported AIDS cases since 2000. For example, the number of cases increased from 18 in 2000 to 26 in 2001 and then to 38 in 2002. This represented a 44.4 percent increase from 2000 to 2001 and a 46.2 percent increase from 2001 to 2002.

The number of reported HIV cases increased 85 percent from 2001 to 2002. During this time period, women experienced a higher rate of increase in the number of HIV cases than did men. For instance, the percent increase in the number of cases from 2001 to 2002 was about 200 percent for women compared to 23.1 percent for men.

Sexually Transmitted Diseases by Sex

- The number of STD cases in St. Thomas and St. John has steadily increased since 1999. There were 177 reported cases in 1999, 184 cases in 2000, 229 cases in 2001, and a high of 346 cases in 2002.
- Across all years, women were overrepresented, compared to men, in the number of reported STD cases.

Figure 5.1 Sexually Transmitted Diseases by Sex, St. Thomas/St. John: 2002

AIDS Cases by Sex

- The number of reported AIDS cases declined from 34 in 1998 to 18 in 2000 and then increased to 38 in 2002.
- During the years of 1998 to 2002, males represented the majority of reported AIDS cases. For instance, men represented 71.1 percent and women represented 28.9 percent of all reported cases in 2002.

Figure 5.2 AIDS Cases by Sex, Virgin Islands: 1998 to 2002

AIDS Cases by Age

For the years 2002, 2001, and 1999, the most represented age group for reported cases of AIDS was the 30 to 39 year age group. The highest frequency age category for 2000 and 1998 was the 40 to 49 year age group.

Figure 5.3 AIDS Cases by Age, Virgin Islands: 1998 to 2002

AIDS Cases by Race

For those cases of reported AIDS where the race of the individual was known, 63.9 percent of the individuals with AIDS were Black, 27.8 percent were Hispanic, and 8.3 percent were White in 2002.

HIV Cases by Sex

Women represented the majority of reported HIV cases for the years 2002 and 1998, while men were overrepresented in the years 2001, 2000, and 1999.

HIV Cases by Age

The most common age group for reported HIV cases was 30 to 39 years for 2002, 2000, and 1999, and for the years 2001 and 1998 it was the 20 to 29 age group.

HIV Cases by Race

In 2002, Blacks consisted of 62.9 percent, Hispanics represented 25.7 percent and Whites constituted 11.4 percent of the reported HIV cases in which the race of the individual was known.

HIV Cases by Exposure Category

- From 1998 to 2001, heterosexuals represented the most frequent exposure category for cases of reported HIV.
- In 2002, men who engaged in sexual activity with other men was the most common exposure group for cases of reported HIV.

Chapter 6

CRIME

SUMMARY OF CRIME

This chapter presents U.S. Virgin Islands' trend data on adult and juvenile criminal offenses, arrests, traffic accidents, as well as the issuance of traffic tickets. Unfortunately, current data are only included for the St. Thomas/St. John district since we were unable to obtain data for St. Croix.

The number of juvenile offenses has steadily increased in the St. Thomas/St. John district since 2000, with the single leading offense being assault. In 2002, there were 168 juvenile offenses, compared to 151 in 2001. The highest number of juvenile offenses occurred in 1999, in which there were 239 juvenile offenses.

There were 3,120 traffic accidents in the St. Thomas/St. John district in 2002. This represented a 13.5 percent increase from 2001, in which there were 2,750 traffic accidents.

The total number of traffic tickets issued in the St. Thomas/St. John district declined 42.6 percent from 2001 to 2002. More than 32,000 tickets were issued in 2001, while only 18,493 were issued in 2002. The majority of the tickets issued in 2002 were for parking violations, while most of the tickets issued in 2001 were for moving violations.

The number of complaints reported to the Virgin Islands Police Department steadily declined from 50,983 in 1998 to 43,284 in 2000. Because data were not reported for St. Croix, the total number of complaints for the Territory could not be computed for 2001 and 2002.

Burglary and Disturbing the Peace continued to be the top criminal offenses in the St. Thomas/St. John district in 2002, but most arrests were made for felonious assault. Violent crimes, which include homicide, rape, robbery and assault, represented 8.4 percent of all criminal offenses occurring in 2002.

Number of Complaints Reported

The number of complaints reported to the Department of Public Safety in the St. Thomas/St. John district has steadily declined since 1998.

Adult Arrests

While burglary and disturbance of the peace continued to be the leading criminal offense in the St. Thomas/St. John district in 2002, most adult arrests were for felonious assaults.

Figure 6.5 Number of Adult Arrests by Type of Crime, St. Thomas/St. John: 1997 to 2002

Criminal Offenses

- In the St. Thomas/St. John district, the number of criminal offenses occurring in 2002 increased 5.2 percent from 2001.
- Of the 7,387 criminal offenses in 2002, 8.4 percent were violent crimes, which include homicide, rape, robbery, and assault. During the same year, 26.9 percent of the offenses were for disturbing the peace and 15.5 percent were for burglary.

Chapter 7

VOTERS AND ELECTIONS

SUMMARY OF VOTERS AND ELECTIONS

Of the eight candidates in the 2002 U.S. Virgin Islands' gubernatorial race, C. W. Turnbull-V. Richards received more than 50 percent of all votes without a run-off election. In the delegate to U.S. congress race, more than 67 percent of the votes went to Donna M. Christensen, the victor. The senate-at-large race was much tighter, with the victor, Almando R. Liburd, receiving 48.4 percent of the votes and the closest contender, Craig Barshinger, attaining 40.7 percent of the votes. Barshinger received more votes in the St. Croix district than did Liburd. However, Liburd secured 2,000 more votes than Barshinger in the St. Thomas/St. John district, which enabled him to retain the senate-at-large seat.

Since the 1986 election, with the exception of 1994, the democratic party has reigned as governor. A democrat has also held the position of Delegate to Congress since the 1996 election. In contrast, the senate-at-large seat has been held by the Independent Citizen Movement party for more than 10 years.

In the 2002 election, approximately 80 percent of all contenders vying for various positions were men. When considering the gender of political winners, women were even less represented. For instance, in 2002, women represented 16.7 percent (7 seats) of the candidates for Senator, but only 6.7 percent (1 seat) of those winning Senator seats.

For the past three elections (1998, 2000 and 2002), the total number of registered voters in the Territory has gradually declined from 65,988 in 1998 to 52,471 in 2002. While the pattern showed a steady downward trend for St. Thomas, St. Croix experienced more variability in the number of voters, with a decline from the 1998 to the 2000 election and then an increase from the 2000 to the 2002 election. Although the St. Croix district generally had more registered voters since the 1998 election, the number of persons who actually voted was higher in the St. Thomas/St. John district than the St. Croix district. If registered voters do not exercise their right to vote within two consecutive election, they are no longer counted as a registered voter. Persons incarcerated for a felony may also lose their right to vote, thus providing a possible explanation for the decrease in the number of registered voters over the past three elections.

Gubernatorial Election Results

In the 2002 election, the Turnbull-Richards team secured almost 60 percent of all the votes cast in the St. Thomas/St. John district and 40 percent of votes cast in the St. Croix district. Territory-wide, Turnbull-Richards secured more than 50 percent of the votes cast, thereby defeating the other seven contenders.

Figure 7.1 Gubernatorial Election Results by Candidate, Virgin Islands: 2002

Delegate to Congress Election Results

Donna M. Christensen maintained the position of Delegate to Congress in the 2002 election with a wide margin win over the other three contenders. Christensen secured 65.9 percent of votes in St. Croix and 69.4 percent in the St. Thomas/St. John district.

Senator-at-Large Results

The 2002 senate-at-large race was close, but Almando Liburd was the victor and retained the seat for another term. Although Liburd received a higher percentage of the Territory-wide votes than the other contenders, he failed to receive the highest percentage of votes in the St. Croix district. In the St. Croix district, Barshinger received more votes than Liburd.

Past Governors

With the exception of the 1994 election, a democrat has been elected Governor since 1986.

Past Delegates to Congress

A democrat has held the Delegate to Congress position since the 1996 election.

Past Senator-at-Large

A member of the Independent Citizens Movement (ICM) party has consecutively held the position of Senator-at-Large since the 1994 election.

Number of Registered Voters

Since the 1998 election, the number of registered voters in the Territory has steadily declined. The St. Croix district had more registered voters in the 1998 and 2002 election years. However, more voters come to the polls in the St. Thomas/St. John district than in St. Croix since the 1998 election year

Figure 7.2 Number of Registered Voters, Virgin Islands: 1998, 2000, and 2002

Candidates for Political Offices by Sex

- Of the more than 100 candidates vying for political offices in 2002, only 18.7 percent were females.
- By political office, women represented 25.0 percent of the candidates for Governor, 12.5 percent for Lt. Governor, and 16.7 percent for Senator in the 2002 election.

Senatorial Election Results by Sex

- Of the 14 Senate seats, females held 26.7 percent in the 1994 and 1996 elections, 20.0 percent in the 1998 and 2000 elections, and only 6.7 percent in the 2002 election.
- In the 2002 election, there were seven female candidates but only one female was elected Senator.

Total Persons Voted on St. Croix

- The St. Croix district had approximately 1,600 more registered voters than the St. Thomas/St. John district in the 2002 senatorial election.
- Approximately 65 percent of registered voters in the St. Croix district voted in the 2002 election.

Total Persons Voted on St. Thomas/St. John

- In the 2002 senatorial election, the St. Thomas/St. John district had approximately 1000 more persons vote than the St. Croix district.
- About 74 percent of registered voters in the St. Thomas/St. John district voted in the 2002 election.

Chapter 8

TOURISM

SUMMARY OF VISITORS

Tourism remains the main industry in the U.S. Virgin Islands. Thus, the Territory depends heavily on tourism in the generation of revenue. Approximately \$900 million to \$1.3 billion has been generated by visitor expenditures between 1998 and 2002. Visitors spent an average of \$400 to \$500 per visit during this same time.

Visitors arrive in the Territory by airplane and cruise ship and are classified as tourists or excursionists. Tourists are those visitors who stay in the Territory for more than 24 hours, while excursionists are those who spend less than 24 hours in the Territory, such as cruise ship passengers.

From 1997 to 2002, the number of visitors to the Territory ranged from about 2.0 million in 1999 to 2.6 million in 2001. The number of visitors declined 7.6 percent between 2001 and 2002. In 2002, 73.4 percent of the Territory's visitors were cruise ship passengers. About 93 percent of the Territory's cruise ship passengers in 2002 arrived at St. Thomas/St. John ports. The majority of the Territory's air visitors, 79.4 percent, also arrived in St. Thomas in 2002.

Since 1998, more than 70 percent of the Territory's hotel guests were from the United States. New York City accounted for approximately 40 percent of guests from the U. S. mainland. From 1998 to 2002, Virgin Islanders stayed in the Territory's hotels more often than individuals from Puerto Rico, the other Caribbean Islands, Canada, Europe, and Central and South America.

Number of Visitors, Virgin Islands

- The Territory has two classifications of visitors—tourists and excursionists. Tourists are visitors who spend more than 24 hours in the Territory and excursionist are those who spend less than 24 hours in the Territory, such as cruise passengers.
- Cruise ship passengers represented 71.4 to 75.5 percent of the Territory’s visitors from 1998 to 2002.
- From 1998 to 2002, 2.0 to 2.6 million visitors came to the Territory each year.

Figure 8.1 Number of Visitors, Virgin Islands: 1998 to 2002

Number of Visitors by Type and District

- In 2002, 90.6 percent of all visitors to the Territory came to the St. Thomas/St. John district.
- About 93 percent of Territory’s cruise ship visitors came to St. Thomas/St. John ports in 2002.
- In 2002, 79.4 percent of the Territory’s air visitors arrived in St. Thomas.

Place of Residence of Hotel Guests

- In 2002, 71.5 percent of the Territory's hotel guests were from the United States.
- Approximately 30 percent of all hotel guests were from New York City during the 1998 to 2002 time period.
- From 1998 to 2002, Virgin Islanders stayed in the Territory's hotels more often than did individuals from Puerto Rico, the other Caribbean islands, Canada, Europe, and Central and South America.

Visitors Per Island

- The number of visitors to the Virgin Islands declined 7.6 percent from 2001 to 2002.
- In 2002, the Territory generated about 1.2 billion in visitor expenditures.
- The average visitor to the Territory spent \$523 in 2002.

Figure 8.2 Average Expenditure per Visitor, Virgin Islands: 1998 to 2002

Chapter 9

RAINFALL AND TEMPERATURE

SUMMARY OF RAINFALL AND TEMPERATURE

The U.S. Virgin Islands has a subtropical climate tempered by easterly trade winds that keep the humidity relatively low. There is little seasonal temperature variation and slight differences between rainy and dry months. However, the rainy season is generally from May to November.

Temperatures rarely get below 75 degrees on St. Croix and 73 degrees on St. Thomas. In Spring and Summer months the temperatures range in the mid to high 80's. Rainfall data for 2001 and 2002 were not available for St. John. Temperature data were available for St. John for 1998 to 2002.

Between 1998 and 2002 St. Thomas and St. Croix received more than 24 inches of rainfall each year, except in 1998 where rainfall on St. Croix was a mere 16 inches. St. Croix's highest monthly rainfall during the years 1998 to 2002 occurred in May 2001 when the island received 12.1 inches of rain.

REVENUE AND BUDGET

SUMMARY OF REVENUE AND BUDGET

The U.S. Virgin Islands' estimated total amount for general fund revenues and contributions for 2002 was \$537.9 million. This amount represented less than a 1 percent increase from the previous year. From 1998 to 2002, the majority of general fund revenues were derived from taxes. For 2002, it was estimated that 513.8 million dollars would be collected through taxes, which was a 5.6 percent increase from the previous year's 486.8 million dollars in tax revenue.

The operating budget of U.S. Virgin Islands' public institutions increased since 2001. For instance, the operating budget in 2002 was 557.9 million dollars, which was a 24.0 percent increase from 2001. Of all public institutions, the Department of Education accounted for 26.5 percent of the 557.9 million dollar total operating budget for the Territory's public institutions in 2002. In that same year, an increase in the operating budget occurred for all public institutions, excluding the Department of Health, of which had a reduction of 3.0 percent in its operating budget.

The U.S. Virgin Islands' direct federal expenditures increased 41.8 percent from 2001 to 2002. Direct federal expenditures included such items as government grants, salaries and wages, payments for individuals, and procurements and other programs. In 2002, government grants accounted for 46.4 percent of the 573.0 million dollars in direct federal expenditures, while payments to individuals represented 39.8 percent of the direct federal expenditures.

The U.S. Virgin Islands has experienced an increase in the number of homes and condominiums sold since 1997. In 2000, 401 homes were sold, which was a 5.8 percent increase from 1999. During that same year, there were 303 condominiums sold, compared to 260 in 1999. The average home sales price increased 13.5 percent in St. Thomas/St. John and 8.8 percent in St. Croix from 1999 to 2000. During that same period, there was a 20.5 percent increase in the average condominium sales price in St. Thomas/St. John and a 25.6 percent increase in St. Croix.

General Fund Revenues and Contributions

The U.S. Virgin Islands' total estimated amount for revenues and contributions has increased since 1999. In 2002, the U.S. Virgin Islands total estimated revenues and contributions was 537.9 million dollars, compared to 468.9 million dollars in 1999. While revenue from taxes and contributions increased from 2001 to 2002, revenue from licenses, fees, permits and contributions declined.

Figure 11.3 Net Revenue, Virgin Islands: 1998 to 2002 (in millions)

Virgin Islands Government General Fund

- From 2001 to 2002, the General Fund operating budget increased 5.6 percent and net revenues declined 3.2 percent.
- Individual income taxes account for 60.8 percent of the net revenues in 2002.

Federal Remittance and Expenditures

- Rum excise taxes have increased from 50.3 million dollars in 1998 to 70.9 million dollars in 2002.
- Direct federal expenditures increased 41.8 percent from 2001 to 2002.
- Government grants accounted for the majority of direct federal expenditures in 2002

Miscellaneous

- A 29.4 percent decrease occurred in number of business applications, a 6.3 percent decline in number of registered vehicles, and a 4.9 percent reduction in number of telephones from 2001 to 2002.
- Taxable gross business receipts declined from 2,495.0 million dollars in 2001 to 2,390.1 million dollars in 2002.

Figure 11.4 Average Condominium and Home Sales Price, Virgin Islands: 1996 to 2000

**Real Estate Transactions**

- House sales increased 10.3 percent in St. Croix and 2.0 percent in St. Thomas/St. John from 1999 to 2000.
- From 1999 to 2000, there was a 22.9 percent increase in St Croix condominium sales and a 11.3 percent increase in St. Thomas/St. John condominium sales.

Chapter 12

HUMAN SERVICES

SUMMARY OF HUMAN SERVICES

This chapter contains data on foster care, adoptions, food stamp participants, juveniles, emergency services referrals, income assistance, and cancer care services. In addition, information on paternity and child support is provided for the first time in this chapter. The data were obtained from the U.S. Department of Health and Human Services.

From 1998 to 2002, the number of children in foster care in the U.S. Virgin Islands has declined from 277 in 1998 to 171 in 2002. The number of adoptions in the Territory has fluctuated over the years from 30 in 1998 to only 2 in 2002, according to data provided by the U.S. Department of Health and Human Services. The majority of the Territory's adoptions occurred in St. Croix from 1998 to 2002.

The number of households receiving food stamps steadily declined from 5,731 in 1998 to 4,166 in 2001. However, there was a minimal increase in this number from 2001 to 2002. In 2002, 63.0 percent of the households receiving food stamps were in St. Croix. The actual number of persons participating in the food stamp program has also declined over the years. Thus, the overall dollar value of the food stamps distributed in the Territory went from 7.3 million dollars in 1998 to 5.8 million dollars in 2002.

From 2001 to 2002, the juvenile caseload for the Department of Human Services increased by 8.0 percent. In 2002, the Territory's juvenile caseload was 336. During this same year, 90.2 percent of the juvenile caseload was adjudicated delinquents. The other 10 percent was Persons In Need of Supervision, commonly referred to as "PINS".

While there are several emergency services provided by the Department of Human Services, the most common type of referral was for Protective Services. Protective Services include such areas as neglect, physical abuse, and sexual abuse. Between 1998 and 2000, most protective services referrals were for neglect. In 2001 and 2002, the majority of these referrals shifted to physical abuse.

Income Maintenance assistance was available in several forms. Temporary Assistance for Needy Families, commonly referred to as TANF, provided financial support to 1,333 children and adults in 2002. The number of TANF recipients has steadily declined since 1998. Most TANF recipients were in St. Croix. General assistance, old aged assistance, aid to the disabled, and aid to the blind are other forms of income maintenance assistance.

Cancer care services were provided to 30 persons in 2000 and 2001. The caseload declined by 57.6 percent from 1998 to 1999 and again by 28.6 percent from 1999 to 2000. In 2001, the total cost for services increased to \$157,158, which was an 83.1 percent increase from 2000. Medication, Chemotherapy, and Radiation costs totaled \$99,271 in 2001.

In 2002, 7.2 million dollars of collected child support were distributed in the Territory to families in the Paternity and Child Support system. Of this 7.2 million dollars of distributed collections, 82.5 percent went to families that applied for child support enforcement services and were not TANF recipients. These families are classified as "never state assisted" meaning they never received financial assistance from the government. Distributed TANF collections decreased by 38 percent in 2001 from the previous year. In 2002, 51.7 million dollars of arrearages, also commonly referred to as back pay, were owed.

Figure 12.1 Number of Children in Foster Care by District, Virgin Islands: 1998 to 2002

Figure 12.2 Number of Children Adopted, Virgin Islands: 1998 to 2002

Food Stamp Participants and Distribution

- Approximately 60 percent of the 4,240 households receiving food stamps in the Virgin Islands were located in St. Croix in 2002.
- Between 2001 and 2002, the total value of coupons declined in the Territory but increased in St. Croix.
- While the number of households receiving food stamps increased in St. Croix, the number of person coupons distributed decreased during the 2001 and 2002 time period.

Emergency Services Referrals

- The majority of emergency services referrals in the Territory were for protective services during the 1998 and 2002 time period.
- Between 1998 and 2000, most protective services referrals were for neglect.
- In 2001 and 2002, the most common type of protective services referral was for physical abuse.

Income Maintenance Assistance

- Temporary Assistance for Needy Families was the largest financial assistance program in the U.S. Virgin Islands, providing assistance for more than 1,300 children and adults in 2002. However, the number of children and adults assisted has steadily declined since 1998.
- In 2002, approximately 80 percent of TANF recipients in the Territory were in St. Croix.
- About 60 percent of the total General Assistance recipients were on St. Thomas until 2002, when approximately 78 percent of the General Assistance recipients were in St. Croix.

Cancer Care Services

- The caseload for cancer care services declined from 1998 to 2000 and then remained the same from 2000 to 2001.
- Although the size of the caseload for cancer care services remained unchanged from 2000 to 2001, the cost of services increased 83.1 percent.

Child Support

- In 2002, total distributed child support collections had a slight increase over 2001.
- Non-TANF (no state assistance) cases represented 86.2 percent of the current support due and 81.7 percent of arrearages due in 2002.
- Net undistributed collections were the amount of collections that remained available for distribution in a future quarter.
- Collections forwarded to Non-IV-D cases were those collections received through income withholding and processed through the Paternity and Child Support office on behalf of non-custodial parents who were ordered to pay child support. These collections were then forwarded to the custodial parent during the quarter.
- The Net Federal Share of TANF/Foster Care Collections were the portion of child support collections used to reimburse the federal government for its share of past assistance payments.
- State Share of TANF/ Foster Care Collections were collections that were divided between the local and federal governments to reimburse their respective shares of assistance payments.
- Collections per dollar of administrative costs were the total amount of collections distributed during the year divided by the total amount of administrative expenditures. For every \$1.00 spent in 2001, only \$.96 was collected.
- Incentive payment actuals were the portion of the gross federal share of collections that was retained by the Territory in addition to its share of TANF/Foster Care collections.
- Data on caseloads and paternities were not available.

Chapter 13

PRICES AND COMMERCE

SUMMARY OF PRICES AND COMMERCE

Chapter 13, which is a new addition to the Statistical Digest, presents data on the U.S. Virgin Islands' Consumer Price Index, selected business statistics, and energy consumption.

In 2001, the U.S. Virgin Islands, for the first time, produced a Consumer Price Index (CPI), which measures the cost of goods and services in the Territory over time. The CPI is based on a sample of prices of food, household items, clothing, transportation, medical services, recreation, education, and other goods and services that people buy on a daily basis. The CPI is used not only to measure prices but also to assess inflation and provide valuable economic insights into the Territory's governmental policies. During 2001, prices on "All items," which represents a weighted average of combined category indices, rose by 2.8 percent.

The Economic Census of Outlying Areas, which is conducted every five years, provides data on business establishments, sales and receipts, and private sector employment. Since 1977, this Census suggests that the retail trade has been the largest sector in the Territory's economy. It produced 1.1 billion dollars in sales in 1997, an increase of 20.1 percent over 1992, and employed almost 9,000 people. Approximately 80 percent of retail establishments in the Territory were corporations in 1997.

Interpreting the CPI

The Consumer Price Index starts with a base period, which is the reference point for measuring the price changes of goods and services. At the base period, all goods and services are assigned a value of 100.0. Prices in all other time periods are represented as percentages of the base period price. Thus, if prices increased by 4 percent, the index would read 104.0. If prices decrease by 2 percent, the index would read 98.0. The base period for the Virgin Islands CPI is January 2001.

Figure 13.1 Monthly Consumer Price Index, Virgin Islands: 2001

Monthly Change in the CPI, Virgin Islands

- The U.S. Virgin Islands' Consumer Price Index increased steadily each month until October. As of October, prices either fell or remained the same. The most significant price change occurred in recreation.

**Industry Statistics**

The following synopsis of industry statistics is an excerpt taken from the US Census Bureau's report on the 1997 Economic Census of Outlying Areas:

- The retail trade sector of the U.S. Virgin Islands economy produced \$1.1 billion in sales in 1997, up 20 percent over 1992.
- Retail was the largest of the five sectors covered by the 1997 Economic Census of the Virgin Islands.
- Retail trade accounted for nearly one-half of the \$2.3 billion in 1997 sales or revenues reported for all the covered sectors.
- Service establishments, which provide a variety of amusement, personal, lodging, transportation, and other services, reported receipts of \$655.4 million and employed 7,289 people at 667 locations in 1997.
- The Territory's 115 wholesale establishments generated sales of \$252.4 million in 1997; employment at these establishments increased from 1,030 in 1992 to 1,144 in 1997.
- The construction sector experienced an increase in the number of establishments (from 147 to 203), receipts (from \$168.9 million to \$184.5 million) and employment (from 2,224 to 2,623) between 1992 and 1997.

Legal Form of Business

- Corporations accounted for approximately 77 percent of all business establishments in the Territory and 94 percent of sales and receipts.

Industry Statistics by Island

- Between 1992 and 1997, about 65 percent of businesses operating in the Virgin Islands were located in the St. Thomas/St. John district.
- Of the \$2.3 billion in sales, over 70 percent was generated in the St. Thomas/St. John district during the 1992 to 1997 time period.
- Approximately 21,000 persons were employed in the Territory's private sector from 1992 to 1997.
- Between 1992 and 1997, over 62 percent of the private sector employees were in the St. Thomas/St. John district.
